

GoMart Service Design Blueprint

Service Blueprint for GoMart - Checkout To Delivery Flow

GoMart Service Reliability Research x Design x Product Management | April 2021

andrea.steven@gojek.com, hana.ernanto@gojek.com, chethan.kumar@gojek.com

What Is A Service Design Blueprint?

The example of a service blueprint

- A **diagram** that visualizes the **relationships between different service components** (people, props, and processes) that are directly tied to touchpoints in a specific customer journey.
- Part two of customer journey maps.

Why Do We Need A Service Design Blueprint?

- Service design blueprint is an ideal approach to experiences that are **omnichannel**, involve **multiple touchpoints**, or require a **cross-functional effort**
- As our business grows and being a complex multi-user service, we need to take into consideration the **interaction and experience between user types**

What Is The Output Of This Exercise?

- A **service blueprint** (journey diagram) for checkout to delivery process - Know where we are
- Service **gap and room for improvements*** throughout the journey - What we need to improve
- Proposed **ideal journey** - Know where we want to be

**Improvement ideas will be tied back to OKRs, product vision or roadmap to define the priority improvement.*

What Will We Do?

To optimise the discussion, the activity is divided into three series of activities...

	Session 1	Session 2	Session 3
Objective	To identify the service gap or friction that might arise between user types across the journey. We will then brainstorm the potential solution to close the gap	Each group will present the result of group activity in session 1. The intent is to consolidate the gap and solution	Action planning refinement. We will prioritise the potential action based on OKR and feasibility
Expected Output	Gap identification Potential solution	Consolidated gap and ideas	Action item prioritisation, impact to OKR
Duration	75 mins	Max 90 mins	Max 90 mins
When	7 April 2021	W/c 12 April 2021	W/c 12 April 2021

Session 1 - Schedule Overview

Activities - Day 1	Time Allocation (75 mins)
Introduction:	10 mins
Breakout room	5 mins
Group Activity - Run through the flow	5 mins
Group Activity - Gap identification	20 mins
Group Activity - Problem-solving	25 mins
Group recap	5 mins
● Back to the main room ● Briefing for next session	5 mins

What **Will Not** Be Covered Here?

- **Pre-booking** and **post-delivery** journey
- Evaluating the **design component** (i.e. the button, color, visual, UI aspect, etc). Instead, we want to focus on the flow and potential feature/process to close the gap
- The exercise of product **sketching** and **prototyping**. Prototyping and user research will be done separately from the service design exercise

The Focus of This Exercise

- Gap evaluation from **customer experience standpoint**
- Given the limited time, we **will not** brainstorm the **improvement action** for other user types **aside from customer**

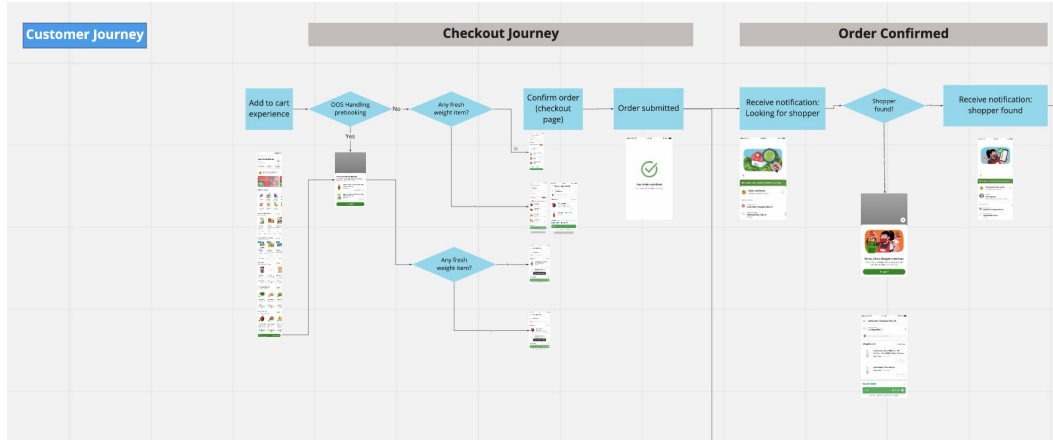

Rules of The Game

- **Don't be shy!** All voices are important
- **Be creative** - go wide instead of focusing on quality
- Go beyond the screen, **think holistically** - open to explore gap and ideas beyond what presented at the screen

Team & Topic Distribution

Group 1	Group 2	Group 3
Scope: Checkout - Order Confirmed	Scope: Order Monitoring (Happy Flow) until delivery process	Scope: Order monitoring (OOS case) + post delivery screen
Moderator: Andrea Participants: • Indra • Vipul • Amar	Moderator: Chethan Participants: • Markus • Gaurav • Juan • Pragati Chauhan	Moderator: Hana Participants: • Victor • Kevin • Jagdeep • Robin

Now, let's get to the business!

Please access the Miro board [here](#)
Password: groceries

For **gap** identified, please use pink post-it 

For the **proposed idea**, use the blue post-it 

Session 2

Thursday, 15 April 2021

Recap - The Overview of

We Are Here Today

	Session 1	Session 2	Session 3
Objective	To identify the service gap or friction that might arise between user types across the journey. We will then brainstorm the potential solution to close the gap	Each group will present the result of group activity in session 1. The intent is to consolidate the gap and solution	Action planning refinement. We will prioritise the potential action based on OKR and feasibility
Expected Output	Gap identification Potential solution	Consolidated gap and ideas	Action item prioritisation, impact to OKR
Duration	75 mins	Max 90 mins	Max 90 mins
When	7 April 2021	15 April 2021	22 April 2021

Session 2 - Schedule Overview

Activities	Time Allocation (60 mins)
Opening	5 mins
Introduction	5 mins
Group 1 - Presentation & Q&A	15 mins
Group 2 - Presentation & Q&A	15 mins
Group 3 - Presentation & Q&A	15 mins
Briefing for the next session	5 mins

Team & Topic Distribution

Group 1	Group 2	Group 3
Scope: Checkout - Order Confirmed	Scope: Order Monitoring (Happy Flow) until delivery process	Scope: Order monitoring (OOS case) + post delivery screen
Moderator: Andrea Participants: • Indra • Vipul • Amar	Moderator: Chethan Participants: • Markus • Gaurav • Juan • Pragati Chauhan	Moderator: Hana Participants: • Victor • Kevin • Jagdeep • Robin

Rules of The Game

- **Don't be shy!** All voices are important
- **Be creative** - go wide instead of focusing on quality

Checkout Journey

Customer Activity	Identified Gap	Potential Solution
Receive OOS notification - to adjust the cart with the available item	Customer doesn't know what to replace. Moreover, they have to go back to the homepage again to find suitable replacement	Give suggestion on the potential item replacement. So customers do not have to go back again to the homepage
	If the proposed alternative is also not available	Suggest on different Merchant, Add to wishlist
Confirming order (before checkout)	Customer is not aware of how does the promo works for weighted SKU? 1kg = 10% off how much is 5kg = ?	?
	Not highlighting enough the total savings	?
	No information related to covid-19 and the precaution options to ensure that GoMart is safe	Add checkbox that customer can choose (i.e. no contact delivery)
	Store get closed on the last moment + no notification of the remaining time before closing	Notify the customer the store is about to close
	Not enough payment option - especially for monthly/routine buy use cases	Add paylater & Credit card payment option
	No flexibility for customer to choose the delivery time (slot time)	Schedule delivery option
Order submitted	No clear information on when the shopping will happen (how long do they have to wait before the shopper start)	Information of the window time to wait for shopper

Order Confirmed

Customer Activity	Identified Gap	Potential Solution
Receive notification - looking for shopper	No information on How long the waiting time is. We should be able to communicate it better	
Receive notification - shopper found	No information on how the shopper will look for the best the customer?	Have a video calling feature maybe? Or Shopper can send pictures

Order Preparation - Shopper Choosing The Item (1)

Customer Activity	Identified Gap	Potential Solution
Receive notification - order will be prepared & driver is found	What happens when we miss ETA? Or, ETA gets adjusted	Order completion ETA throughout the journey
		Letting customers add SKU or Order level customer notes to Shopper or driver after order placement. However, there should be a cutoff until when customer add notes etc though.
Receive notification - order is prepared & driver is found		Show an animation when order picking is going on at the outlet. Map has no relevance once the driver is waiting at the outlet for order to get ready. Make Maps still accessible through a CTA
		Live tracking of what or how many SKUs have been picked etc. Basically show the progress of how much of order picking is done.
		Photo sharing or some kind of confirmation when Customer notes are taken care of. When multiple options are available based on customer notes
		Shopper/merchant suggesting a new/additional product as well to the customer. This suggestion could be based on customer buying pattern. Or, if the new SKU is something that merchant/shopper believe customer will be interested.

Order Preparation - Shopper Choosing The Item (2)

Customer Activity	Identified Gap	Potential Solution
Receive call from shopper - OOS update	Customer are not on their phone to communicate with shopper/driver leading to longer delivery time and shopper/driver cannot confirm on OOS case	
	Customer cannot chat with shopper as they can quickly chat with driver	Create customer-shopper chat and develop image sharing by shopper and customer (recorded consent)
Item replacement coordination with shopper	There's currently no screen for item replacements	
	No visibility on the quality of the items for customers for orders with shoppers (especially for fresh items)	
	Price limit -- should we notify customer that shopper cant scam them by adding >125% of the original price	
	Back and forth confirmation with shopper/driver for orders if replaced items increase the total amount to over 125%	Moving the responsibility for oos confirmation and replacement to merchant for orders without shoppers as their store crew knows better about the inventory and freshness of the items instead of drivers

Order Preparation - Shopper Choosing The Item (3)

Customer Activity	Identified Gap	Potential Solution
Item replacement coordination with shopper	Customer cannot select on the app which item they want to replace the OOS items with (have to think through or communicate with the shopper / driver on the replaced items	Provide in-app recommendation to customers on possible replaced items using Machine learning to predict best possible recommendations to customer in the case of OOS
	No consent given by customer except during the phone call (verbal)	Customers can choose whether he/she want replacement during the order process (save time for both shopper & customer)
	Customer cannot reject the replacement via app	
	Customer can't control which items they want to be replaced, & which items they don't want replacements	
	In case customer want to change his/her mind regarding the replacement SKU, he/she cannot contact shopper again	

Delivering Order & Order Delivered

Order Journey	Customer Activity	Identified Gap	Potential Solution
Delivering Order	Receive notification - driver is on the way to customer		Notification right when driver is about to reach the customers' place.
Order Delivered	Receive item		Rating, reviews on the order received for merchant, or the shopper involved.
			Bookmark specific order (or item) on a given merchant outlet. So that they get suggested when ordering next time
