There are four typical business types of online grocery services in the market, based on their product distribution strategy and warehouse management

Key local competitors in Indonesia generally adopt store partnership and/or front warehouse model

						
Overview Description	On-demand instant online grocery service within Grab consumer app ecosystem.	Scheduled delivery online grocery service, partnering with local offline grocery stores.	Online grocery service, offering relatively-bulky SKU sourced directly from local farmers.	Online grocery service offering SKU sourced directly from local farmers.	Online grocery section within Tokopedia operating in e-commerce model.	Online grocery section within Shopee operating in e-commerce model.
Business Model	Store Partnership	Store Partnership	Front Warehouse (w/ brand)	Front Warehouse (w/o brand)	Front Warehouse (w/o brand) + Store Partnership	Front Warehouse (w/o brand) + Store Partnership
Country Origin	Singapore	Indonesia	Indonesia	Indonesia	Indonesia	Indonesia
Type of SKU Sold	F&B, Non-F&B	F&B, Non-F&B	F&B Only	F&B Only	F&B, Non-F&B	F&B, Non-F&B
Service Area Covered	8 Countries	3 Countries	1 Country	1 Country	1 Country	6 Countries

Day in the life of JABO residents: Offline Grocery shopping between noon to evening

Gojek platform users depend on online groceries only to complement offline

Apr 2020

Q: Where do you shop in the past 1 month? (multi-answer), N= 1306 GOJEK respondents

Note: Pandemic has triggered offline merchants to provide on-demand delivery (via whatsapp)

Most of Gojek platform users are Incidental monthly online shoppers

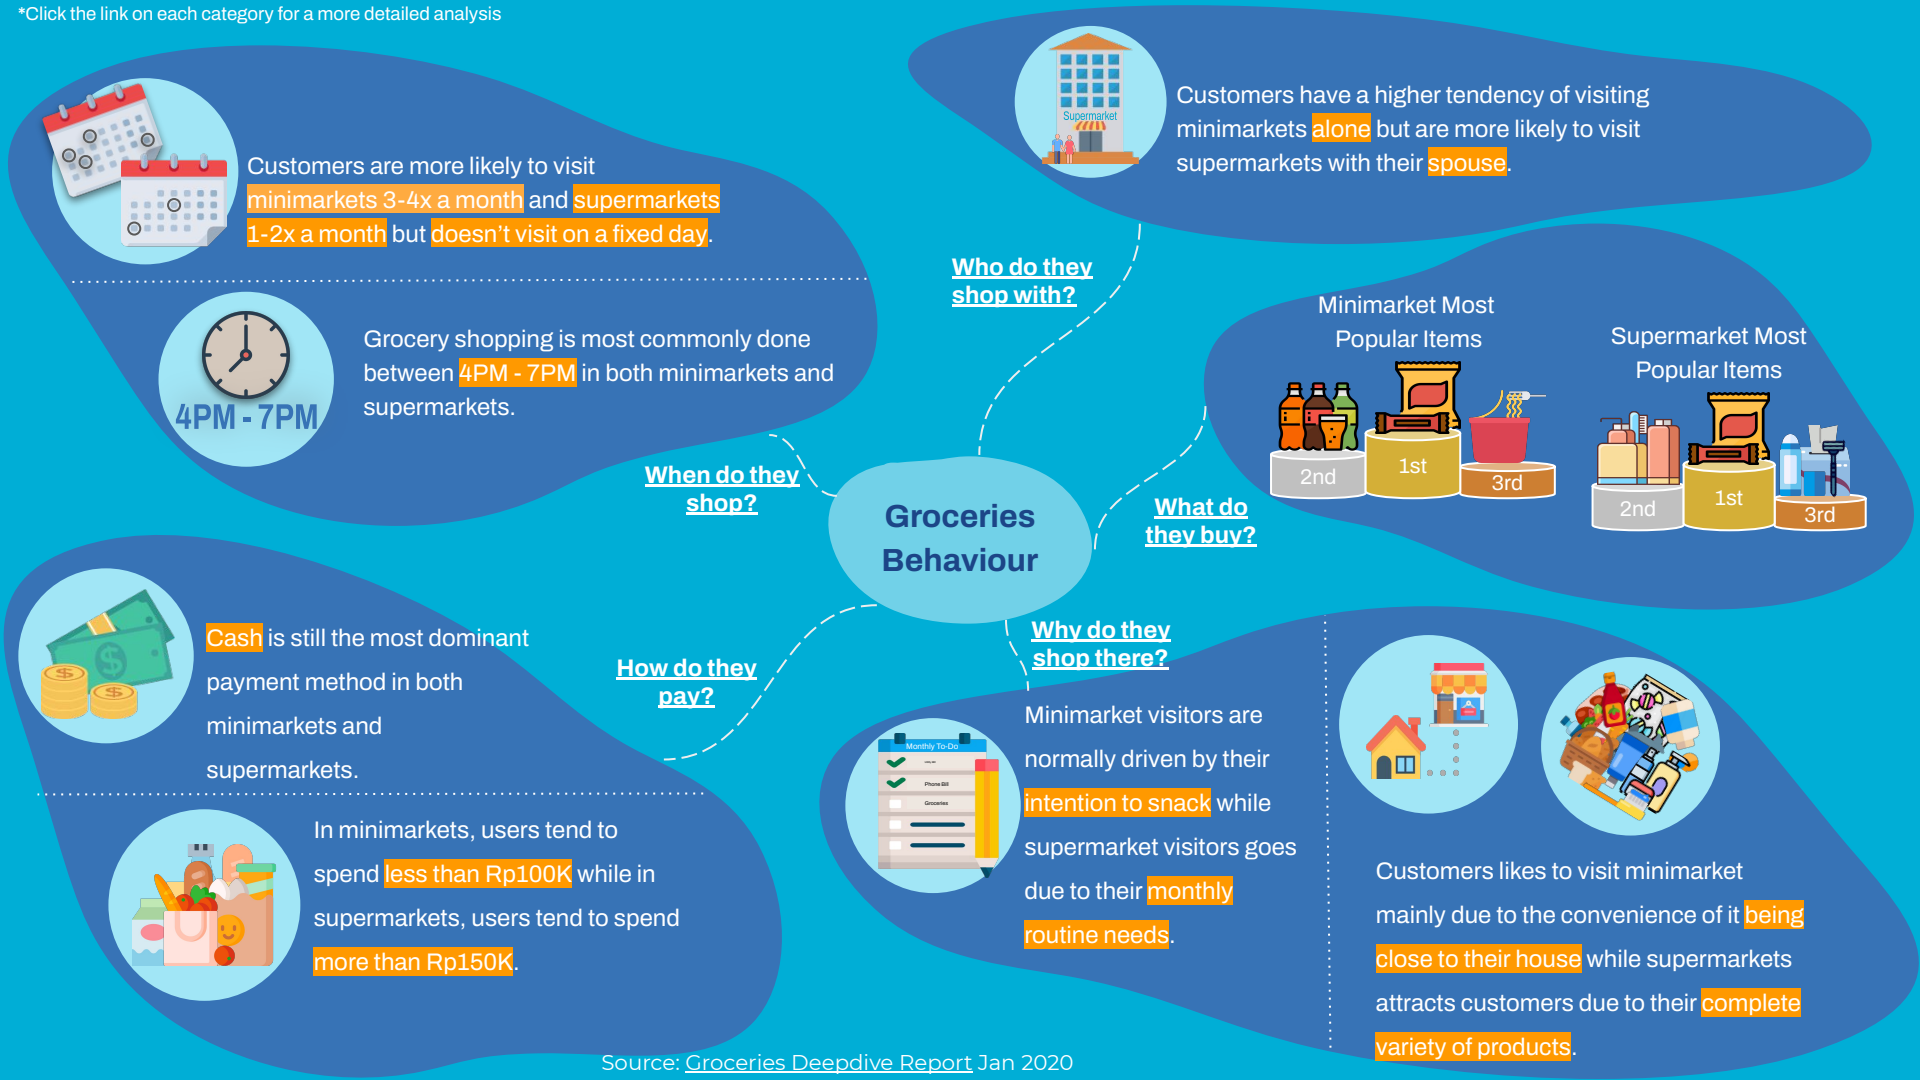

Online shopping frequency	% of Users	Median Basket Size
~ Daily User	8%	5-10 items
Weekly User	31%	5-10 items
Monthly User	45%	Less than 5 items
Non Frequent User	15%	Less than 5 items

Q: On average, how many times do you shop for household needs through online in a month?

Q: On average, how many items do you buy every time you shop online?

Online heavy shoppers are likely to be the one with kids

Demographic	Offline Shopper	Online Shopper	Online Heavy Shopper (Daily & Weekly Shopper)
Age	<25 y.o: 40% 26 - 40 y.o: 38%	26 - 40 y.o: 46% <25 y.o: 40%	26 - 40 y.o: 52% <25 y.o: 36%
Gender	Female: 60%	Female: 64%	Female: 65%
Marital Status	Single: 54% Married with kids: 37%	Single: 61% Married with kids: 31%	Single: 50% Married with kids: 41%
Occupation	Office worker: 25% Student/college student: 24% Blue Collar: 19%	Office worker: 34% Student/college student: 25%	Office worker: 34% Student/college student: 17%
Total Respondent	65% N=853	33% N=453	13% N=170

Before learning about user persona, it is important to first learn about different types of grocery shopping use case.

	1 Routine grocery shopping (A planned, scheduled shopping activity that is done repeatedly in every certain time interval)			2 Ad-Hoc grocery shopping (No regular pattern of time and items are seen)
	Monthly "Big"	Bi-Weekly "Restock"	Weekly and Daily "Fresh"	Ad-Hoc
Overview and Purpose	Stocking up various types of essential SKU at once for a month.	Restocking several items to survive until the next big shopping schedule.	Purchasing fresh produce and ingredients for weekly and/or daily cooking purposes.	Urgent, sudden-out-of-stock at home shopping accompanied by cravings (e.g. snacking, cooking).
Basket Size per Checkout	The biggest in terms of quantity and GMV.	Relatively medium; less than monthly, but can be more or less similar to weekly or even ad-hoc.	Relatively medium; depends on the number of family members and their consumption.	The smallest of all other, but can be bigger due to the cravings (i.e. "sekalian jajan" mentality).
Typical SKU Purchased	Non-fresh; basic staples, dry food, personal care, mom and baby needs, cleaning products, frozen food.	Non-fresh; basically similar to monthly big shopping.	Fresh; fresh meat, vegetables, and fruit.	Non-fresh; can be anything, but most often condiments, snacks, mom and baby needs.
General Needs	One-stop shopping Reasonable to cheap price Good item quality	SKU size variety Reasonable to cheap price Good item quality	Good and fresh item quality Reasonable to cheap price	Stock availability assurance Fast, fast, fast
Online Grocery Needs	Grocery delivery safety Up to H+2 delivery	Up to H+2 delivery	Instant delivery Proper packaging. See details here .	Instant delivery

Source: [Project Kaimono](#), November-December 2020

From a qualitative perspective, there are 3 different routine grocery shopper personas.

These personas are derived from two dimensions that influence customers' needs and considerations in choosing shopping destination.

THE ANCHORING DIMENSIONS

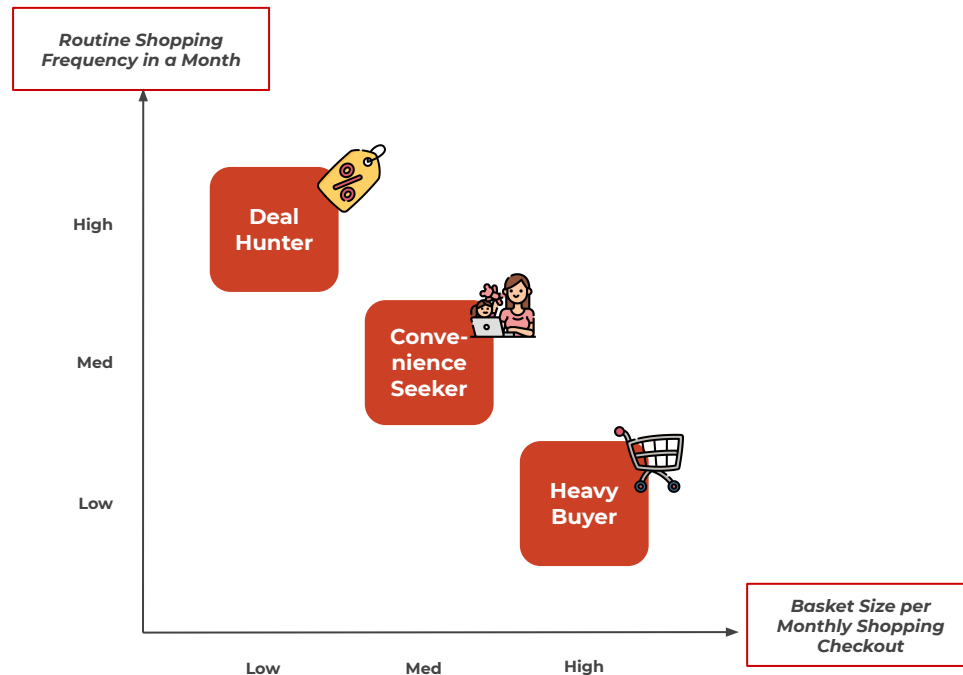

ROUTINE SHOPPING FREQUENCY IN A MONTH FOR NON-FRESH ITEMS

The **overall grocery shopping checkout frequency** done in a month, taking into account the **monthly and bi-weekly*** shopping.

BASKET SIZE PER CHECKOUT FOR MONTHLY BIG SHOPPING

The **overall basket size** (quantity and GMV) **per one time checkout** for the monthly big shopping.

**Weekly/daily shopping is not included, since people have different behavioural pattern in shopping for fresh and non-fresh items.*

Source: [Project Kaimono](#), November-December 2020

Each persona has a unique way to shop for routine groceries.

Heavy Buyers and Convenience Seekers are the all-at-once big shopper when it comes to monthly grocery, while Deal Hunters are the opposite; they tend to split their overall monthly grocery needs into multiple checkouts.

Heavy Buyer

Low Freq x High Basket Size

Convenience Seeker

Med Freq x Med Basket Size

Deal Hunter

High Freq x Low Basket Size

Basket Size per Monthly Shopping Checkout

An abundant amount of items in a single checkout; 2 full shopping trolleys or at least 3-4 cardboard boxes worth IDR 2-3 mio.*

A lot of items in a single checkout; 1 full shopping trolley or 1-3 cardboard boxes worth IDR 1-2 mio.*

Smaller number of items in multiple checkouts; around 1 cardboard boxes worth IDR 200k - 500k per checkout.*

Routine Shopping Frequency in a Month

Overall low non-fresh routine shopping frequency.*

- 1x monthly checkout.
- 1-2x bi-weekly checkout.

Overall medium non-fresh routine shopping frequency.*

- 1-2x monthly checkout.
- 2-3x bi-weekly shopping checkout.

Overall high non-fresh routine shopping frequency.*

- 2-3x monthly checkout.
- 4-6x bi-weekly checkout.

**Based on the pattern that we found in the diary study and qualitative interview.*

Source: [Project Kaimono](#), November-December 2020

Different routine shopping habit affects each persona's needs and where they decide to shop routine groceries from.

Heavy Buyer

Low Freq x High Basket Size

All-at-once big shopper; shop a huge amount of monthly groceries in a single checkout.

Convenience Seeker

Med Freq x Med Basket Size

Need that "hand extension" to execute the one-stop big shopping; offline hassle avoider.

Deal Hunter

High Freq x Low Basket Size

Shop for the monthly big grocery needs in multiple checkouts, for the sake of lower price.

Destination and Consideration

Monthly

Grocery Safety
go offline

"I shop a huge amount of items at once for monthly shopping. I need them to be carried safely to my home, and I have concerns over how the delivery would be if I go online."

This is similar to the findings from [Value Proposition research](#) about trusted delivery method for bulky grocery.

Convenience
use grocery marketplace*

"Monthly offline shopping is such a hassle. I want to still do one-stop bulky shopping from my preferred offline stores, but I need a reliable 'hand extension' to execute it."

Price/Cost
use e-commerce or grocery non-marketplace**

"I want to get overall cheaper price and cost for my grocery shopping."

When shopping in e-commerce, this persona does not mind delaying to buy some items in their monthly shopping list as long as they get more interesting promo.

Bi-Weekly

Personal Safety
use on-demand

Price/Cost
go offline

Personal Safety
use on-demand

Price/Cost
go offline, or use the same app as monthly shopping

Weekly &
Daily Fresh,
Monthly
Frozen

Quality
go offline

Assortment
use e-commerce

Quality

Online Grocery User Journey

When customers shop grocery online, all persona generally has common goals and behaviour throughout the end-to-end user journey.

Source: [Project Kaimono](#), November-December 2020

Different shopping use cases have their own typical characteristics. The most contrast one can be seen between routine shopping (especially monthly) and ad-hoc.

Source: [Project Kaimono](#), November-December 2020

User Behaviour

Friction and Expectation

Feature Benchmark

Ad-hoc

- **Sudden need** to purchase grocery items
- Main consideration in choosing online platform: **Fast delivery method offering (i.e. on-demand) and store distance**
- **Direct ordering.** Open the app, add items to the cart, checkout right away

Nothing in particular

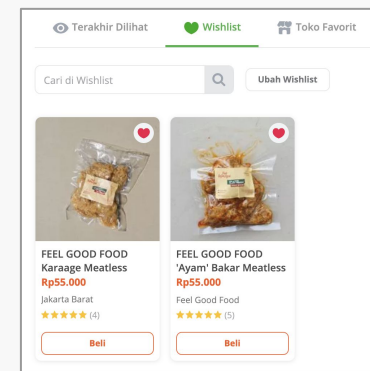

Monthly routine

- **Do stock opname;** check item stock at home, then create a thorough shopping list or take mental notes
- Main consideration in choosing online platform: **Variety of SKU assortment, convenience, grocery safety, and/or price**
- Usually has preferred merchant
- **Delayed ordering.** Start adding items to the cart during idle or relax time, checkout later

PAIN

- Having a hard time remembering what to buy when doing stock opname every shopping time
- Grocery items in the e-commerce wishlist get cluttered with non-grocery items

EXPECTATION | A shopping note and reminder from the online grocery app to help identify what to buy

Tokopedia's Wishlist Feature.

Helpful to assist planning. Able to gather grocery items and revisit later, but they can get cluttered with non-grocery items in the list itself.

User Behaviour

Friction and Expectation

Feature Benchmark

Ad-hoc

- Tend to **use search bar** to find items; straightforward and fast
- **If there's enough time, also browse the catalogue** for complementary items

PAIN | Less relevant search result; need to scroll a lot to find items

EXPECTATION | Item catalogue with real-time stock update

Monthly routine

Use search bar or browse through product category depending on the need

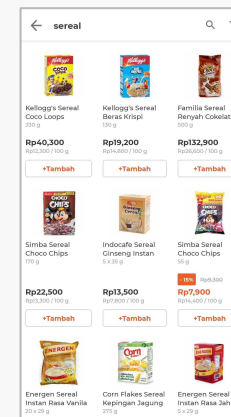

- **Search bar:** Want to **compare price** between items or brands, **avoid being impulsive** by being straightforward
- **Product category:** Want to **discover new item or promo**, making sure no item is left behind to buy

PAIN

- Might be confusing to see long item list
- Lagging app

EXPECTATION

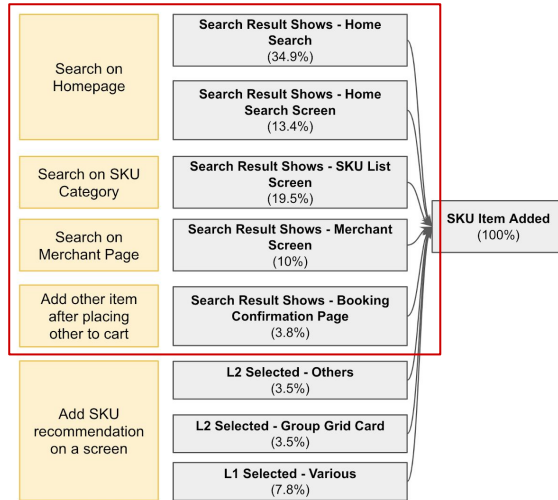

- Smooth and stable app capable of handling heavy traffic
- Wide assortment with structured product category; applicable not only in the catalogue, but also in the shopping list, cart, or wishlist

HappyFresh Search Result displays 9 SKU in one screen, more compared to GoMart who only displays 4-6.

Search bar plays an important role in GoMart, as ~80% of items added to cart are coming from search bar activity.

How does user add a SKU?

Source - CleverTap

- App Version → 4.5.0 and Beyond
- Period → Last 60 Days
- End event → SKU Item Added
- Using Flows feature we can see events happen before the end event

Source: Analysis done by PM

How do customers utilize the search bar?

When know exactly what to buy

Use brand name as the keyword

e.g. "Oreo", "Marlboro", "Rinso"

→ Customers will browse through the list to find the exact variant, for instance Oreo Original / Blueberry

When know what to buy, but want to explore

Use SKU type as the keyword

e.g. "Roti", "Susu", "Minyak goreng"

→ This will result in more search results, and customers will browse through the list to find brands and variants

Source: [Multi-Merchant MVP Design UT](#), August 2020 | [GoMart Search Analysis](#), September 2020

User Behaviour

Friction and Expectation

Feature Benchmark

Ad-hoc

- Choose **instant or on-demand** delivery method
- Apply relevant promo vouchers

EXPECTATION | Cheap service fee (e.g. delivery, convenience fee) or promo around it

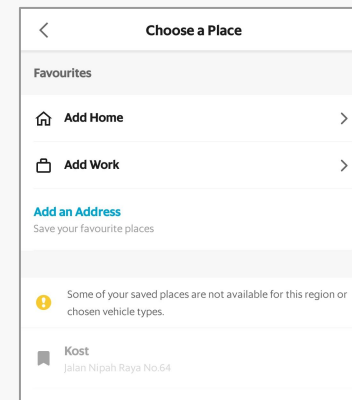

Monthly routine

- Choose **delivery schedule** according to personal preference or availability
- When facilitated by the app, **indicate preferences in case OOS** happen
- Confirming delivery address that has normally been saved in the app
- Apply relevant vouchers or promo

PAIN | Back-and-forth process when paying using bank transfer

EXPECTATION

- One-click, integrated, and safe payment process within the app
- Confirm delivery address without much redundancy
- Cheap overall basket size

GrapeMart Save Multiple Address. Customers can choose the delivery address easily from their saved list.

User Behaviour

Friction and Expectation

Feature Benchmark

Ad-hoc

- Communicate with the on-demand delivery courier to confirm the delivery and coordinate in case OOS happens
- Monitor the delivery progress

PAIN | Item out-of-stock at the store

EXPECTATION | Ability to replace items during the OOS case

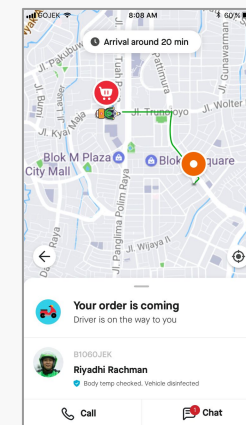

Monthly routine

- Communicate with shopper or merchant in case OOS happens
- Regularly monitor the delivery progress, especially checking on when the item is packed and sent

PAIN

- Shopper or merchant fails to get customers' confirmation during OOS
- Unable to live-track the delivery to estimate arrival time

EXPECTATION | Ability to have a live delivery tracking

GoMart Live Delivery Tracking is something that customers expect to better estimate arrival time.

User Behaviour

Friction and Expectation

Feature Benchmark

Ad-hoc

Relatively similar behaviour for both use cases:

- Check the items; match them with the order list on the app
- Give rating in the app
- File a complaint or report in case of broken items; can be either through courier, merchant (in e-commerce), or the app/platform used.

Monthly routine

PAIN | Wrong item is arrived

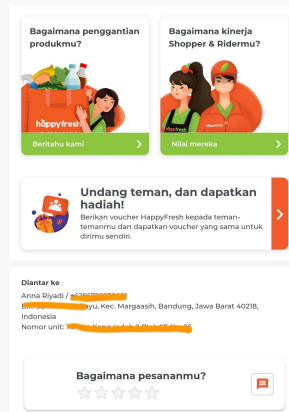

EXPECTATION | TBA

PAIN

- Item come in broken or seemingly unsafe packaging and/or delivery
- Poor communication and long issue resolution SLA

EXPECTATION

- Tidy and proper delivery packaging. See next slide for more details
- Easier communication and faster issue resolution turnaround

HappyFresh Rating. All ratings to be submitted are surfaced in one page right after an order is completed.

Customers in general like the experience of receiving their groceries in not only proper packaging, but also proper manner.

Some expectation examples..

Items are arranged neatly inside the cardboard boxes or shopping bags.

- Fragile items are covered in bubble wrap.
- Food and chemical products are separated to avoid contamination.

Cardboard boxes are stored and/or stacked neatly (e.g. the biggest one below, the smallest one above).

Courier helps carrying the package into inside the house or apartment building, not only until the porch or lobby.

Courier shows good attitude.

- Polite.
- Without being asked, give an information / confirmation to the customers when they are not at home to receive the goods in person

Source: [Project Kaimono](#), November-December 2020

After the order is delivered, receiving a physical receipt is not mandatory as long as the online receipt can fulfill its purpose.

Contains all of the **required information** (just like in the physical receipt). This includes the price update of each item.

Ensure that **physical receipt will not be required by the Customer Service** team for complaint case settlement.

Easily accessible - can be found in the application order history, rather than sending via email only.

Build **trust** and **reliability** - ensure that the **label used for weighting is accurate and in a proper condition** (not ripped through.)

Source: [No Receipt Customer Experience Research](#), August 2020

1. Market Landscape

2. Foundational Consumer Understanding

- User Profile
- Grocery Shopping Use Cases
- User Persona
- User Journey

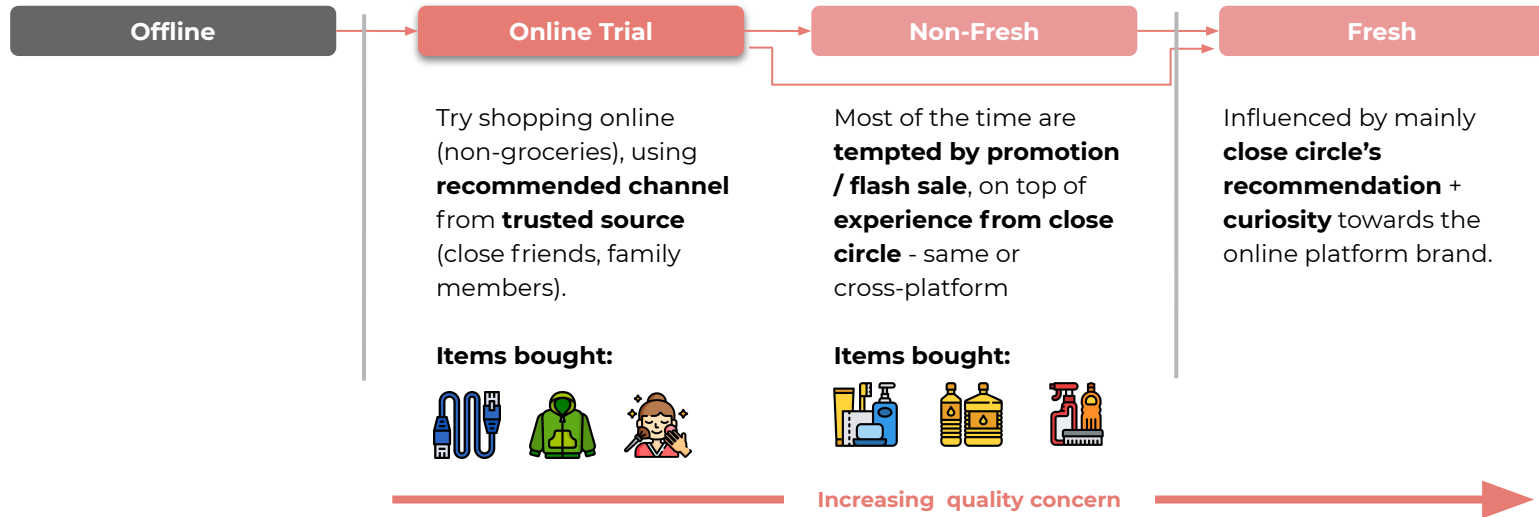

3. Practical Guideline

- How to Increase Conversion Rate?
- How to Increase Basket Size?
- How to Build Trust in Online Grocery?
 - How to Ensure Good Product Quality?

How to Build Trust?

Offline shopper needs to test out the water first before jumping directly to buying groceries online.

People with certain mindset tend to be more careful on doing something outside their comfort zone. A good first time online shopping experience is a key for driving continuity.

How to Build Trust?

To encourage offline shopper to do online grocery shopping more regularly, we need to first build their trust by ensuring several factors.

Seamless Search UX Experience

Hassle free experience to find the best price offering for long SKU list

Wide Product Offering & Stock Assurance

(1) Trusted source
(2) Tangible reason of complete assortment - to give a peace of mind

Safe & Speedy Delivery

(1) Secure - able to maintain quality
(2) Flexible delivery time
(3) All item can be delivered within 1 order

Financial Benefit

Predictable price & delivery cost - will not be higher than going to offline

Expert Shopper

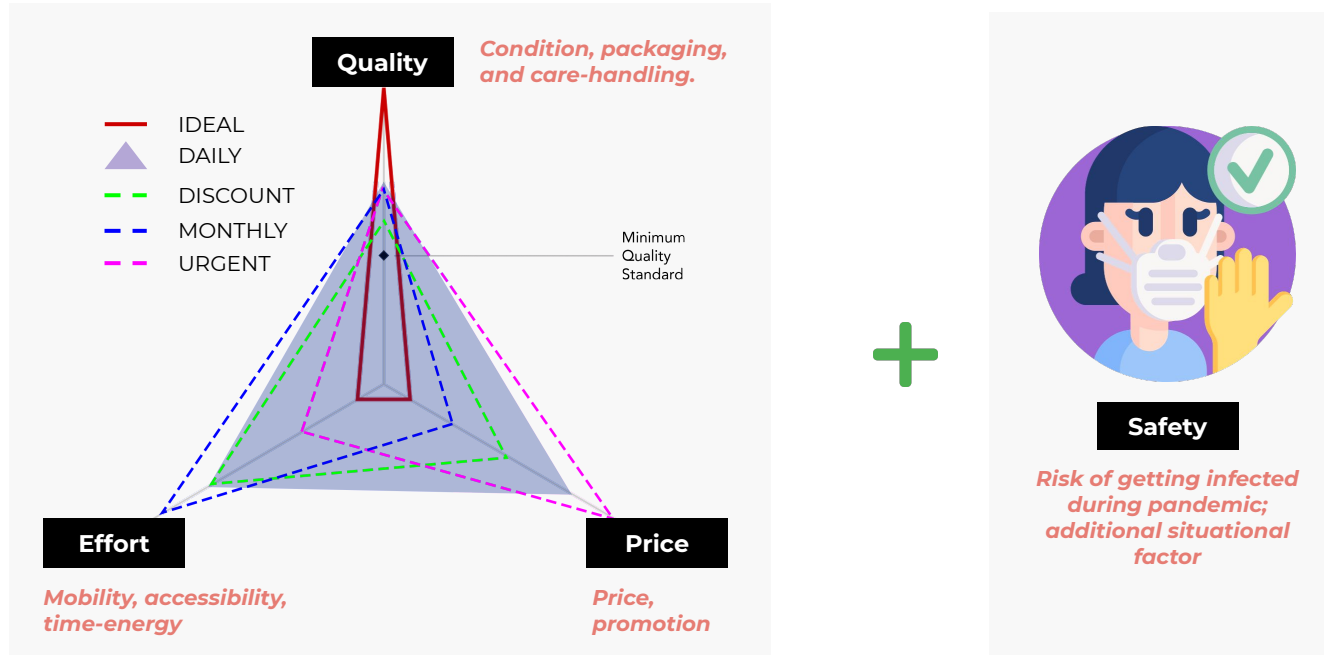

Trusted way of selecting the item. Will ensure freshness and expiry date

Source: [Value Prop Research](#) Aug 2020

How to Increase Basket Size?

When people shop groceries online, they want high quality products at low price with minimal efforts.

Source: [Martian Foundational Research](#) Dec 2018, [Regular Online Grocery Shopping User Journey](#) Aug 2020

How to Increase Basket Size?

Delivering the hygiene “price” and “quality” factors can propel users to place order with larger quantity.

Source: [Value Prop Research](#) Aug 2020

How to Ensure Good Product Quality?

Among the many aspects, one of the most crucial parts is to ensure product quality during the delivery process, which is influenced by the packaging and delivery vehicle used.

[Based on the experiment](#), cardboard box is the most suitable packaging type for monthly grocery use cases, yet not all 2W vehicles are able to carry it.

Having only one standard weight-dimension rule is not advised. Ideally, the order should be allocated to the suitable couriers according to total weight-dimension and its vehicle capacity. The proposed allocation for 2W vehicles can be found in [here](#).

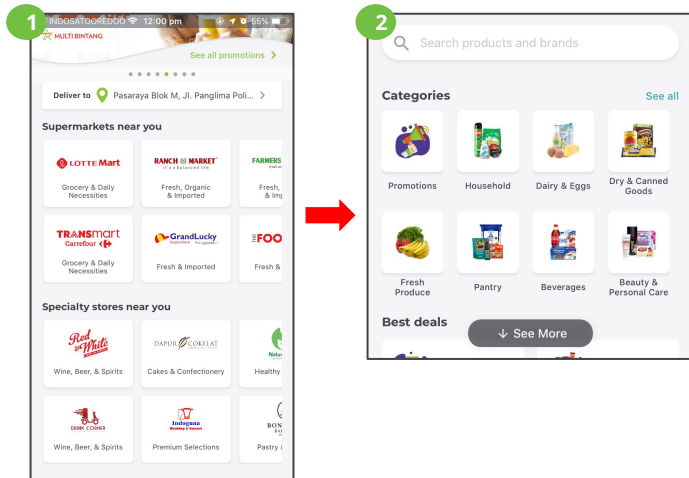

By far, the most optimum maximum capacity of grocery orders for 2W is 30 kg and 2 cardboard boxes.

How to Increase Conversion Rate?

From user experience lens, customers prefer merchant centric discovery process to SKU centric for a store partnership platform.

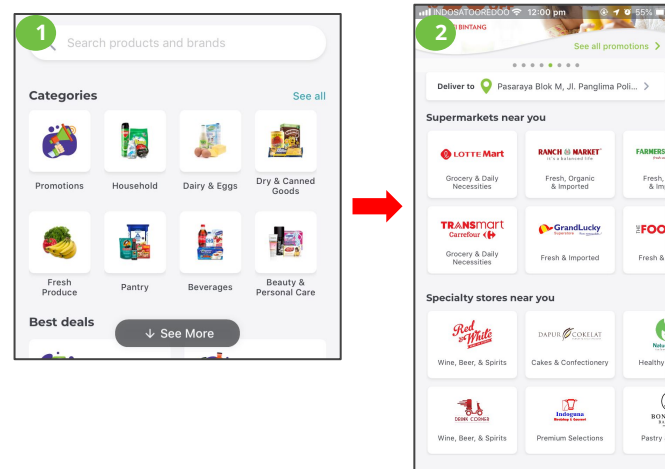

Merchant Centric

Select *merchant first*, then choose item inside the selected merchant

SKU Centric

Select *SKU first* without knowing where it comes from, then choose the merchant at the checkout page that sells the SKU

Source: [SKU Vs Merchant Centric Fact Pack](#) September 2020

How to Increase Conversion Rate?

By having the control to select merchant upfront, customers feel more certain on the order.

One of the main blockers for offline shopper to shop grocery online is the **lack of trust** on order **quality, assortment, and price**. Gaining trust should be the focus to win the market.

In grocery shopping, customers usually **already have some association on merchants and have their own trusted preferred merchants**. Therefore, having the customer to find and choose their trusted merchant upfront might help to **minimise their anxiety while shopping online**.

This process enable customer to ensure that the item will come from **1 order, 1 merchant, and 1 driver** only. Customers prefer to shop from a **one stop solution**.

Source: [SKU Vs Merchant Centric Fact Pack](#), September 2020

How to Increase Conversion Rate?

Surfacing merchant selection can also benefit in-app discovery experience, and help building a “routine use case perception” on GoMart.

Can help to mimic the entertaining offline window shopping experience.

It gives a **glimpse of SKU assortment and SKU quality available** in the platform, which is crucial in the discovery process.

Contribute in creating a use-case-related perception towards the overall platform.

e.g. By having supermarkets that are typically visited for weekly/monthly bulky shopping, customers can perceive that the platform is suitable for routine grocery shopping.

Source: [SKU Vs Merchant Centric Fact Pack](#), September 2020 | [Consumer App Moonshot UT](#), August 2020 | [Homepage Redesign Concept Testing](#), September 2020

Customer Grocery Shopping Behaviour - Shopping Journey

Shopper Behaviour

Previously we have conducted a research with HappyFresh's shopper to understand better their behaviour and experience. Information used in this section is based on HappyFresh's experience.

As part of the onboarding process, HappyFresh trains the shopper first because of the varied background, not limited only to retail industry

On Field Training (2-14 days)

Tandem Order With Store Leader/Senior Shopper

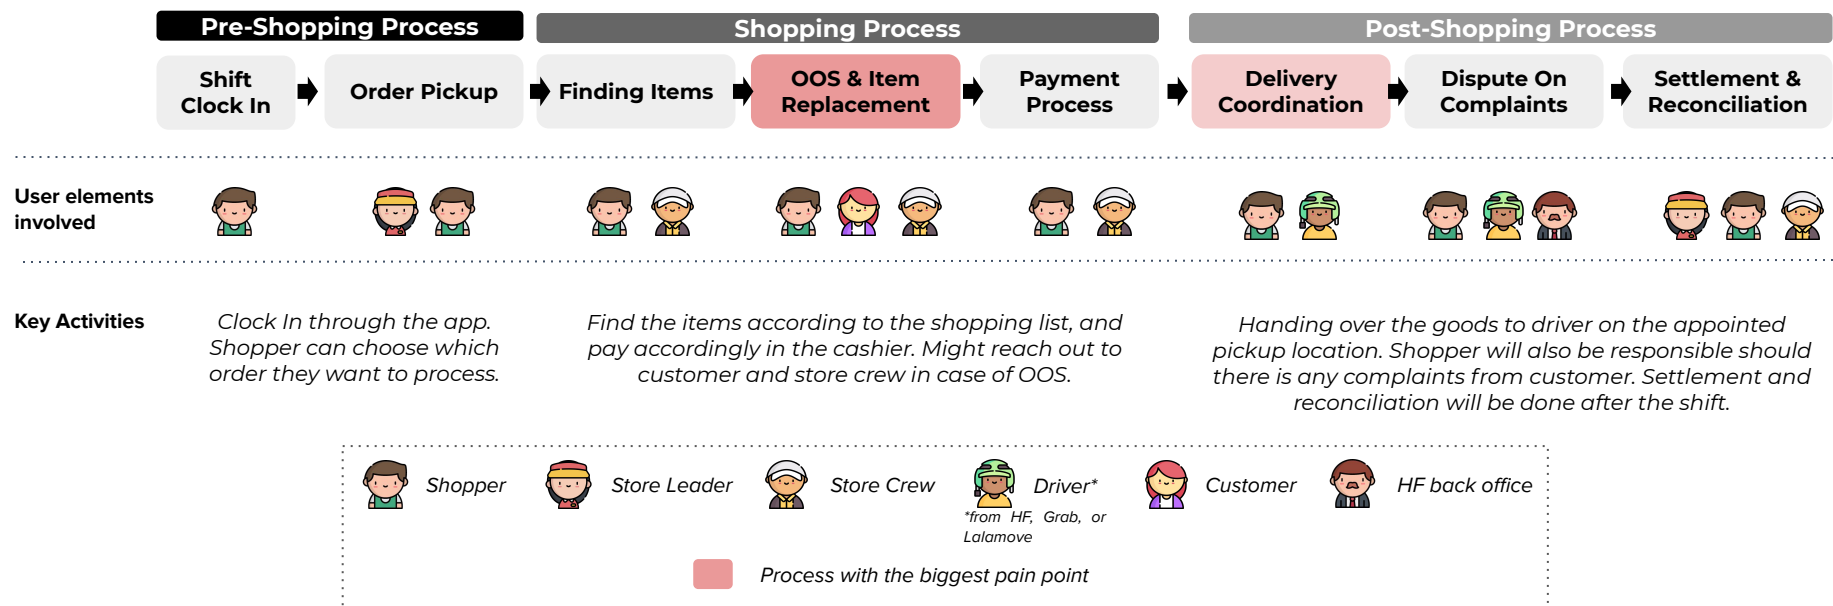

Probation Appraisal

-  1 How to operate the app
-  2 Choose items
-  3 Communicate with customer, especially for item replacement in case of OOS situation

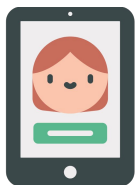

Probation is rated based on performance

Throughout the shopping process, shoppers find most challenges happen in managing interaction with customer and third party delivery courier (Grab and Lalamove)

On shopping process, the main challenge is to coordinate with customer in case of OOS and item replacement.

Unresponsive and demanding customer

Learn to recommend a suitable product substitute.

Retail Grocery Merchant Understanding

Grocery retailers in Indonesia can normally be grouped based on their store and/or SKU assortment size. Some examples..

Convenience Store

Small store, limited SKU assortment

Supermarket

Large store, varied SKU assortment

Hypermarket

Massive store, varied SKU assortment; not only grocery but also appliances/electronics

In general, they have an internal system that supports their daily operational management at the stores

Basic daily operational tasks in the retail store..

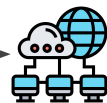

Receiving product from distributor/suppliers

Selling in the checkout counter or cashier

- The moment the cash register opens = The time the transaction starts.
- Item stock balance in the store will be deducted based on the recorded transaction in the cash register.

Retailers normally use an in-house inventory management system called “BOS” (Back Office System).

A typical, simple in-house system normally built by grocery retailers.

BOS Function

Receiving products

Receiving broken item reports

Recording stock movement

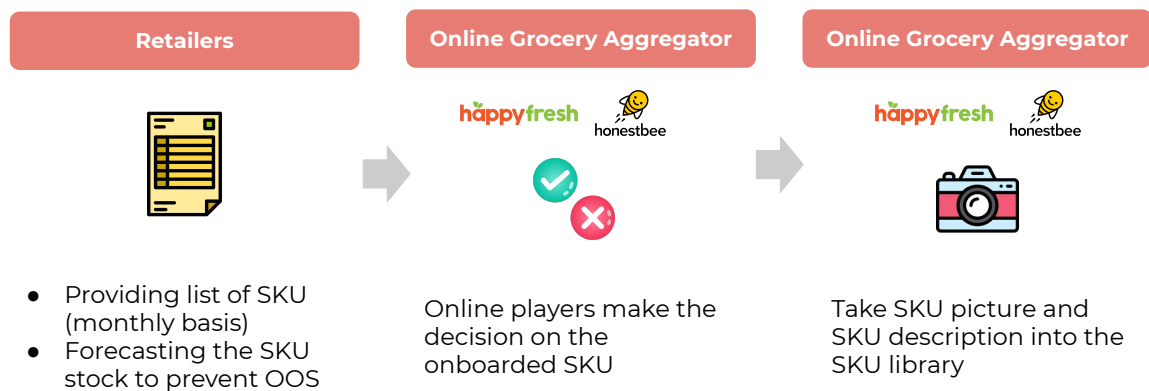

Monthly stock opname

- The data in BOS is not real time. Inventory data in each branch is sent to HQ every end of the day and HQ will calculate the ending balance. The balance that can be seen every morning reflects the balance based on yesterday's transactions.
- Stores that are part of a worldwide group could use a regional system, unless the company is established locally.

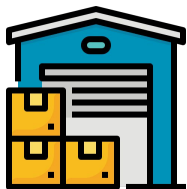

When partnering with online grocery aggregators, below is how the retailers' SKUs are onboarded for the first time

The aggregators take care most of the SKU onboarding and library, which might not be fully beneficial for the offline retailers..

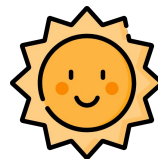

Source: [Local Grocery Retailer Expert Interview](#), July 2020

Retailers do not allocate dedicated stock for online and offline orders, instead stock is based on first come first serve basis

Splitting the stock would cause a lot of **inconveniences** and **inefficiencies** in the retailer's end, thus they consider it as rather impossible to implement the practice.

Store shelf can be replenished any minute, **all day long**, while the window time to receive **stock from suppliers** is from 6AM to 3PM.

The margin range that the retailers receive is extremely wide for different SKU types at the store. When partnering with online aggregator, the overall margin that they get from the sales is also considered small

Some typical SKU margin examples..

Lowest
margin
(2-5%)

Commodity

Baby Milk

Cigarettes

Highest
margin
(35-50%)

Ready-to-Eat
Bakery

Personal Care

General
Merchandise

The commission scheme used by online grocery players is dynamic commission with ceiling rate..

happyfresh

e.g. In HappyFresh and HonestBee..

- commission is for up to IDR 10 mio total sales, with incremental 1.5% for every addition beyond;
- the highest rate scheme is for IDR 60 mio, with the highest commission of 6.5%.

Retailers expect more transparency and collaboration with online aggregator

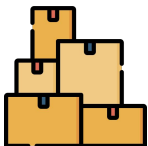

Transparency on margin sharing and cost

Online aggregators sometimes burn margin, which is not a strategy for offline retailers. Retailers want to understand the challenges as well.

Shared goals and monetization plan

Such as taking benefit from brands.

Collaboration to solve OOS issue

OOS is also considered as a loss opportunity for retailers. Nevertheless, up to now there is not solution yet to integrate between offline and online stock.

GoMart Driver Perception

Among the many aspects in online grocery, one of the most crucial parts is to ensure product quality during the delivery process, which is influenced by the packaging and our delivery courier.

Based on the experiment, cardboard box is the most suitable packaging type for monthly grocery use cases, yet not all 2W vehicles are able to carry it.

Having only one standard weight-dimension rule is not advised. Ideally, the order should be allocated to the suitable couriers according to total weight-dimension and its vehicle capacity. The proposed allocation for 2W vehicles can be found in [here](#).

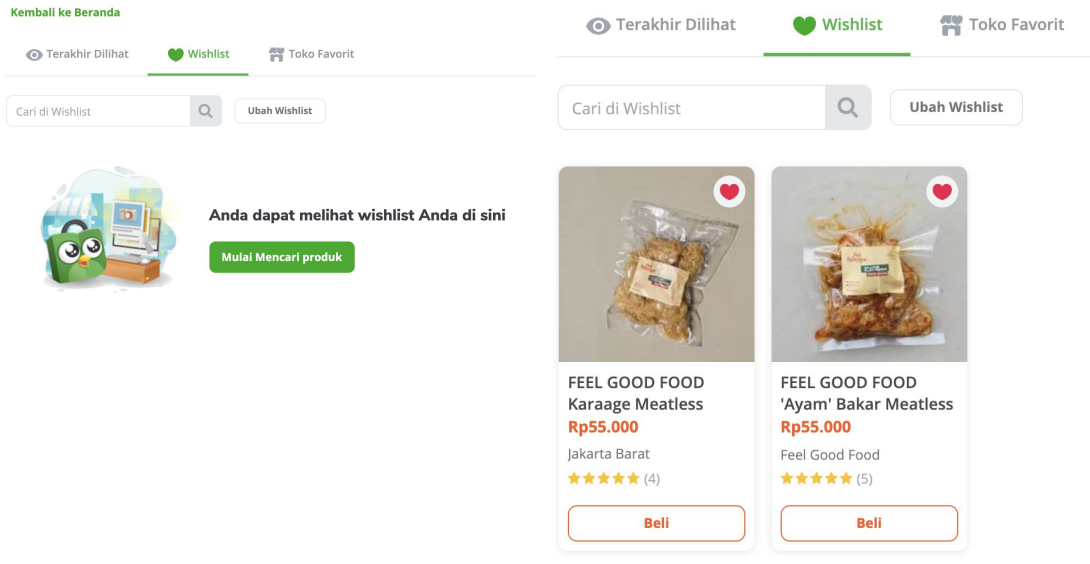

By far, the most optimum maximum capacity of grocery orders for 2W is 30 kg and 2 cardboard boxes.

Appendix

IN-APP COMPETITIVE REFERENCE: **DISCOVERY GAIN POINTS**

Tokopedia Wishlist and Sort/Filter Feature

Feature 1.

Wishlist feature; sometimes is used to gather main grocery items first to checkout later.

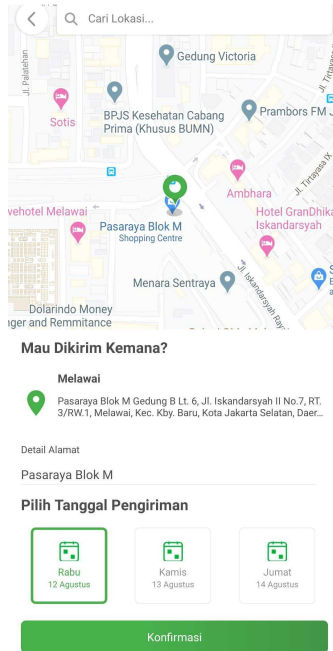

Feature 2.

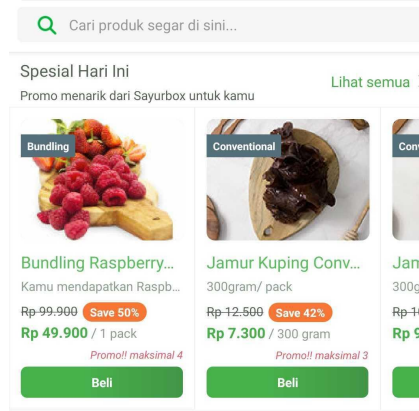

Sort and filter on the search result page.

IN-APP COMPETITIVE REFERENCE: **DISCOVERY PAIN POINTS**

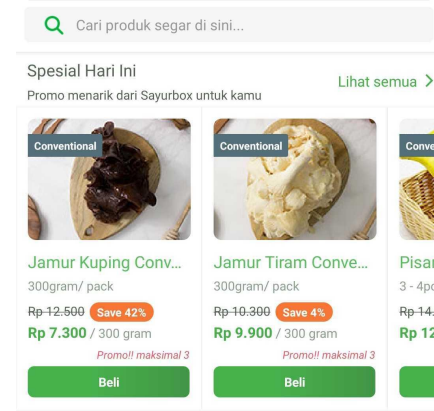

Sayurbox Delivery Slot Feature

Delivery slot needs to be chosen before users looking for items. Different delivery slots result in different SKU assortment, based on stock availability.

For instance, "Raspberry Bundling" SKU is available for Wednesday delivery slot..

..but it's not available for the Thursday delivery slot.

IN-APP COMPETITIVE REFERENCE: CHECKOUT GAIN POINTS

Tokopedia Voucher Feature
