Research Background

Business Objective

- To improve the end-to-end new GoMart shopper order flow.
- To improve BCR and reduce pre-dispatch cancellations.

Research Objective

- To understand drivers' perception and gather feedback on GoMart shopper information and new order flow (driver no edit flow)
- To understand driver's expectations towards the shopper concept (i.e. ways to communicate with shoppers, quality handling, etc)
- To understand driver expectations when receiving order inside a mall (i.e. blockers, information required)

See [research plan](#) for more details and context.

Research Method and Participant

Method

Remote Concept Testing

4 - 5 February 2021

Participant

Segment 1: Have Shopper Flow Exposure (3 Drivers)

- Driver have at least 5 GoMart shopper flow CO* in the past 1 month (26 december 2020 - 26 January 2021)
- The order was from: LotteMart or FoodHall

Segment 2: Have No Shopper Flow Exposure (3 drivers)

- Drivers have no experience completing GoMart shopper flow order
- Have at least 5 GoMart CO** from non shopper flow supermarket in the past 1 month (26 december 2020 - 26 January 2021)

Participant Profile

Segment 1: Have Shopper Flow Exposure

D1. 30 y.o

- Joined Gojek since 2016
- Total shopper order in 1PM: 17
- Total non shopper order in 1PM: 0

D2. 26 y.o

- Joined Gojek since 2018
- Total shopper order in 1PM: 10
- Total non shopper order in 1PM: 1

D7. 32 y.o

- Joined Gojek since 2019
- Total shopper order in 1PM: 13
- Total non shopper order in 1PM: 2

Segment 2: Have No Shopper Flow Exposure

D3. 27 y.o

- Joined Gojek since 2019
- Total shopper order in 1PM: 0
- Total non shopper order in 1PM: 113

D4. 60 y.o

- Joined Gojek since 2015
- Total shopper order in 1PM: 0
- Total non shopper order in 1PM: 43

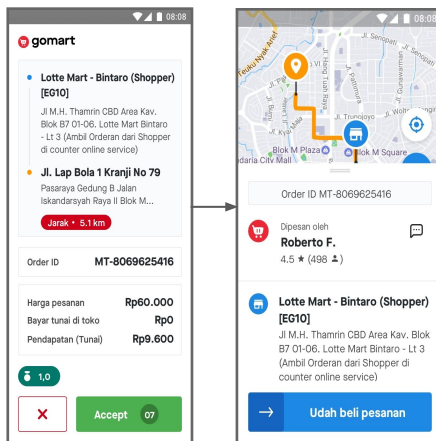

D5. 47 y.o

- Joined Gojek since 2018
- Total shopper order in 1PM: 0
- Total non shopper order in 1PM: 126

Design Presented

In the concept testing, we presented these visual stimulus, which are the current and proposed GoMart order with shopper flow

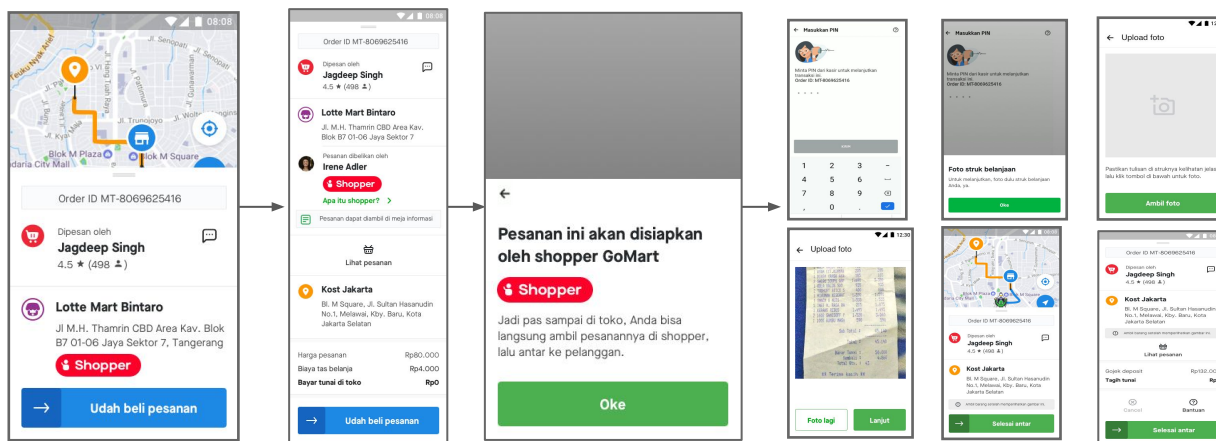

Current Design

Bid Screen

Order Page

New Proposed Design

Order Page

Order Detail Page

Shopper Explanation Page

Edit Order Page
(screens are based on current design)

TL;DR

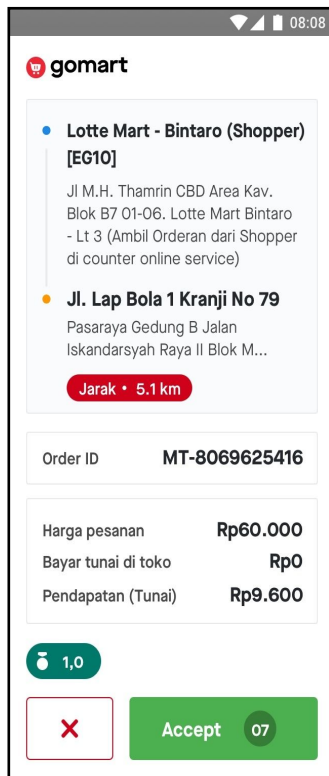

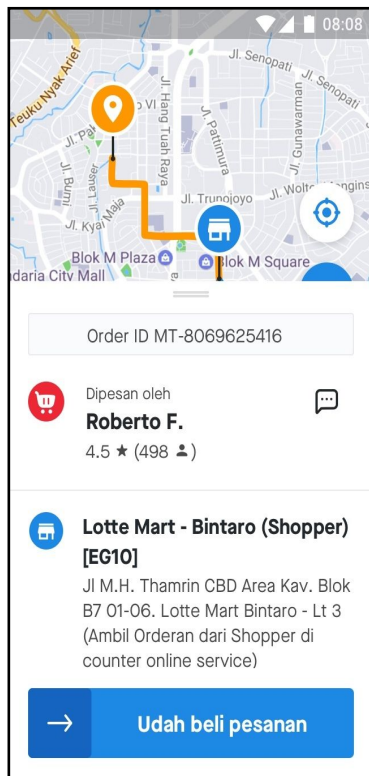

- In the new proposed design, drivers **could clearly notice the “Shopper” sign**. However, with a poor shopper concept understanding, most of them **still could not quickly grasp its meaning**. The issue is stemmed from **the understanding** of “Shopper” term. The combination of **unfamiliar term + in english** make it hard for drivers to intuitively understand the concept. As a result, the driver misperceived the overall flow and did not understand the value proposition of having shopper in GoMart order. Thus, we suggest to focus on improving the shopper concept understanding.
- Regarding the concept, in general, drivers **appreciate the fact that shopper will help to prepare the order**. Yet, with the current low understanding, they **expect GoMart to explain it better**. Regarding the changes on no edit order process, drivers have concern if there will be two different flows between the non GoBiz and GoBiz flow. They expect the process **can be standardised** or to make **a clear precaution** when they need to do edit order process to avoid human error.
- Aligned with the finding in [shopper research](#), drivers also mentioned the needs of having a **communication channel with shopper**. It will help to smoothen the coordination process as well as ensuring the order will not be cancelled due to OOS.
- If there will be **no edit process** in the shopper flow, some drivers assume that ensuring order accuracy and item condition will be the **shopper’s responsibility**. In this case, they expect GoMart to inform this matter to customer so they **will not be blamed** should there is any missing or wrong purchased item.
- One of the concerns for drivers in taking order inside a mall is the **parking location and the fee**. Driver expect there will be a safe and dedicated parking spot for driver to ease the process. To help them navigating the location inside the mall, we could consider to add the detail of **floor and building information**.

Findings

Drivers' Understanding of Shopper

First of all, Shopper sign has a low visibility in our current design. They perceived this is part of the store location

Thus, our drivers cannot understand the “Shopper” idea since we show no information about this

*“The current design is using bracket: (Shopper), for drivers who get it for the **first time they won’t notice the different and the meaning of it.**” - Idham, have shopper exp.*

*“I **don’t see any difference** with the usual GoMart order that I get.” - Hari, have no shopper exp.*

*“I think this is **similar to GoMart that I get...** I cannot identify any differences.” - Adhi, have no shopper exp.*

Our current order screen has 2 big issues:

1. Shopper’s sign visibility
2. Shopper’s detailed explanation

For drivers with no Shopper experience, they have zero understanding and familiarity about it

We tried to prompt them, but it is so hard for them to guess or understand it since it is a new word for them + it is English

Have you ever heard about GoMart order with “shopper”? No

What is your first thought about Shopper?

*“Shopper, **I have no idea**. I know online service counter at Lottemart, but how about Shopper? Is it someone who take my order?” - Adhi, have no shopper exp.*

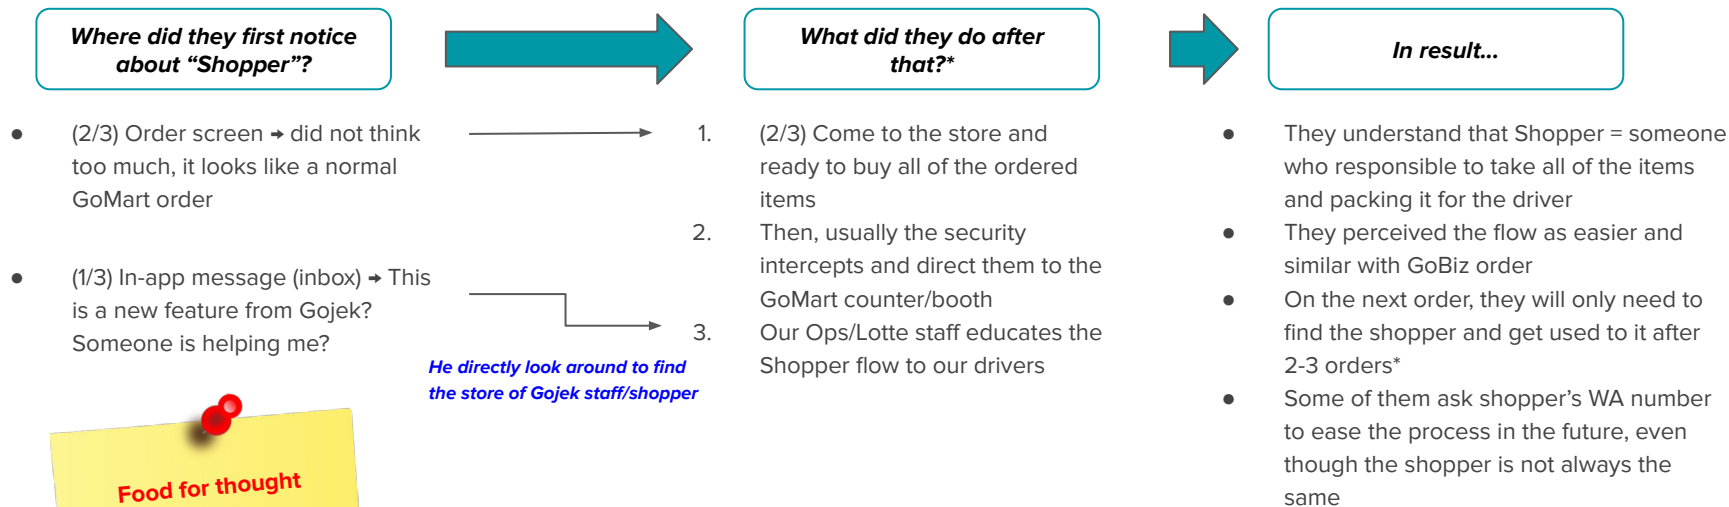

*“**Is this Shopee?** Oh Shopper! What is Shopper? Shop means a store, **is it a place to buy the items**? I don’t know mas” - Hari, have no shopper exp.*

*“**Shopper = shopping?** I don’t know, maybe it is similar like in Alfamart where the cashier take the items for me?” - Ichsan, have no shopper exp.*

Various perception towards “Shopper” word from our drivers - it becomes more crucial for us to put the detailed explanation about it

Most of our experienced drivers also did not understand the concept before they enter the store for the first time.

The staffs (Lottemart/Security/Gojek's Ops) play a crucial role to educate our drivers in their **first order with shopper**

Food for thought

How to move the offline education into our app without reducing the effectiveness of it?

Looking at their first order exp, they still need someone to educate them about the flow of the "Shopper" flow. Otherwise, they will shop the items by themselves and in result create a double buying order.

Here are the stories from our drivers that they do Shopper flow as a normal GoMart order

They have limited information that “Shopper” flow means they need to find a person who have bought all of the items and pack it for them...

Agung, have shopper exp.

At the first time I thought I got GoShop order since the icon is pretty similar. I enter the mall and ready to buy the items (I think it was cooking oil), but Gojek staff intercept me and telling me that this is GoMart not GoShop. Then, they explain to me that I only need to wait around the cashier and no need to spend any cost just like GoBiz. The cashier was also Gojek staff..”

“I did not notice about shopper when I got it for the first time. In my mind, I will buy the items in Lotte by myself. But when I entered the store, the security asked me whether I’m buying for myself or for my customer. Then he guided me to go to the GoMart booth. I met the other drivers there and get explained by Gojek staff (Kuningan City)”

Idham, have shopper exp.

So What?

“It is evident that providing a clear explanation of What and How shopper flow is needed. Based on the current experience, drivers want to know the step-by-step to ensure the order will be going well.”

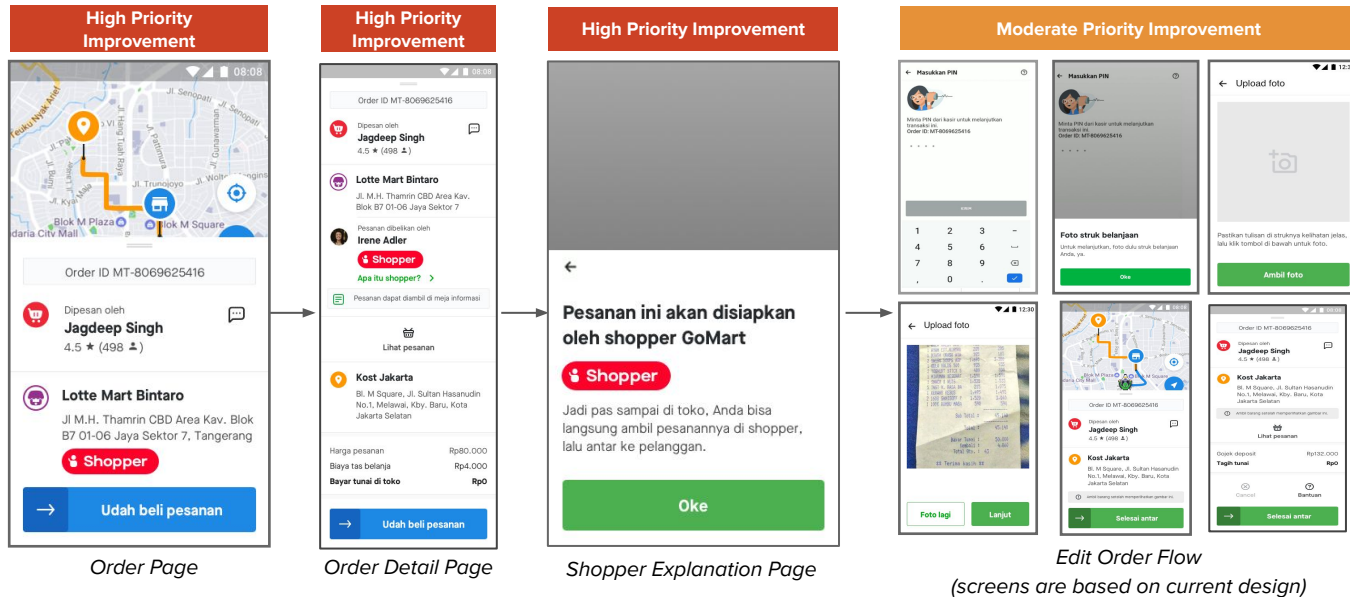

**Let's see if our new proposed
design is helpful enough to make
them understand about the flow....**

Findings

Drivers' Reactions On The New Design

Overall, the current proposed design is still not intuitive enough to explain the concept.

With no prior shopper flow experience, drivers did not notice the difference with the non-shopper GoMart flow. The issue is stemmed from the understanding of “Shopper” term. We suggest to prioritise the improvement based on screens that cause high confusion for drivers.

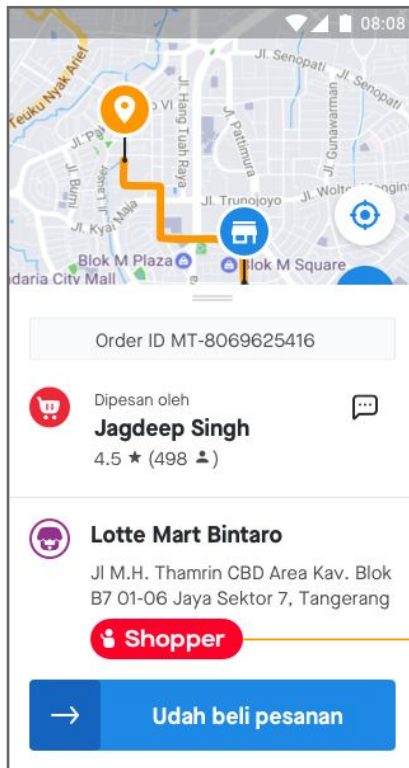

High Priority Improvement = screens in which driver could not understand the concept correctly

Moderate Priority Improvement = screens with concerns/causing considerable confusion

**Disclaimer: priority improvement here is based on analysis and suggestion from the research team*

Drivers could clearly notice the Shopper sign. However, with the poor shopper concept understanding, most of them still could not quickly grasp its meaning.

Considering this page will influence the later driver interactions, It is advised to make driver understand the shopper concept intuitively starting from this page.

Misperception - Shopper Logo

As mentioned [earlier](#), the term “**Shopper**” is **not intuitive** enough to inform driver on the following process.

Moreover, some drivers assume the button is **clickable** which will enable them to see further information of “Shopper” definition.

Suggestion:

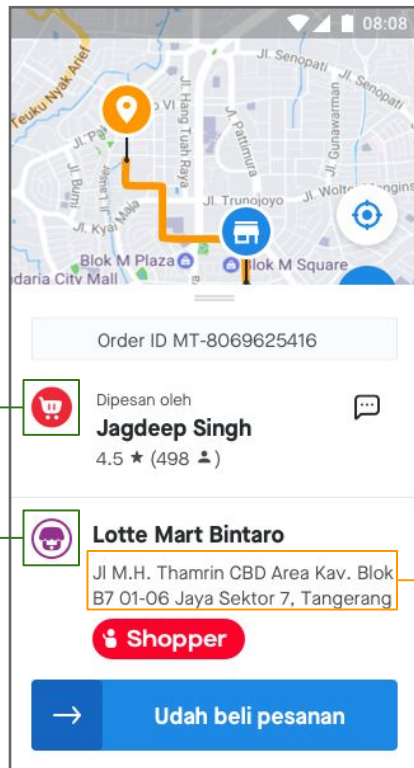

1. To **connect this button** into the “What is shopper page”
2. Add **short text explanation** of what is shopper under the button. E.g. Shopper = “Gojek partner who will do the shopping process”

For supermarket that located inside a mall, it is important to give the detail location information to ease the navigation process.

Gain Points - GoMart and GoBiz Logo

Drivers were able to identify the two logo. The **GoBiz logo** received a **positive reaction**, considering it is currently perceived as a **cashless transaction**. It can help to accentuate the cashless proposition for drivers.

This is important because in the current design, some drivers misperceived GoMart order as a GoShop order (need to pay by cash).

Store Location

Compared to the [current design](#), drivers was **not able to quickly see the detail pickup location** inside the supermarket.

Most importantly. For store that located **inside a mall** driver expect to see in **which floor and building** it is located.

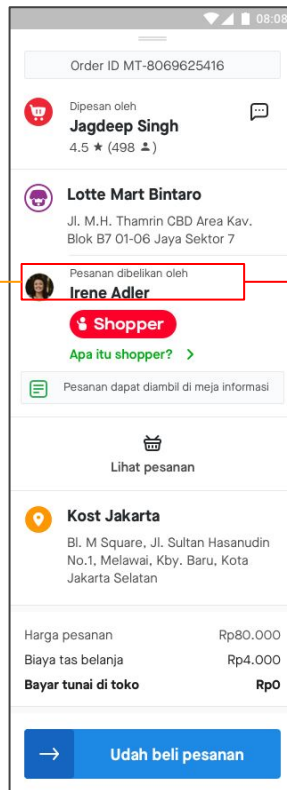

Suggestion: Add the building name and floor

Given the lengthy page that was packed with informations, it took time for drivers to notice the shopper information section.

Drivers who do not have prior shopper flow experience have a harder time to interpret the shopper informations.

Shopper Information

For driver with shopper experience - Having the shopper picture is great. Yet, since it was **not clickable** to be zoom in the shopper face, the driver expect the field shopper to **use a name tag** as an identifier in the field.

Misperception- Shopper Information

For driver with no shopper experience - With the minimum understanding of shopper concept, they were **confused** on the **additional one user** information in this page, aside from the customer.

They assume this user was the one **who paid the order**, as explained with the wording of "Pesanan dibelikan oleh".

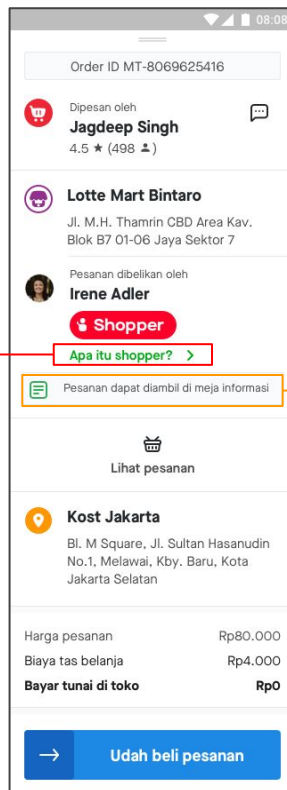

For drivers with zero understanding of “shopper” term, they do not know what to expect from the shopper information page.

In fact, the text is not intuitive enough to give them an idea to look for more information on that page.

Misperception - Shopper Information

For driver with no shopper experience - The text “Apa itu shopper” is not intuitive enough. Some drivers did not realise that it was clickable and became even more furious as why it was asking them the meaning of shopper.

Suggestion: change the text to be **more intuitive**. E.g. “*Pelajari Tentang Shopper*” or “*Click Here To Learn About Shopper*”

Misperception - Pickup Location

Some drivers misperceived this text as a location note that was written by the shopper.

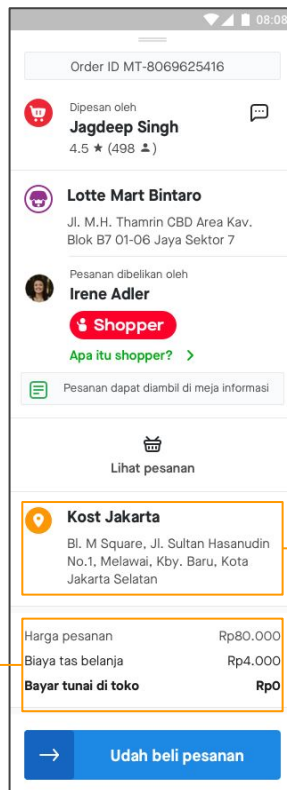

Furthermore, they expect it **to be standardise across the merchants**. It will be easier for them to memorise to always go to a certain area to pick up the order. E.g. the current pickup location in Alfamart is always at the cashier

While the bottom section is relatively straightforward for the drivers, they expect it to be developed further, for instance on the availability of customer delivery note.

Need Improvement - Cost Detail Information

A driver pointed out that it will be better to also include net income in this section. So they will have better clarity on the fee from GoMart order.

Suggestion: To add information regarding the net income

Need Improvement - Delivery Note

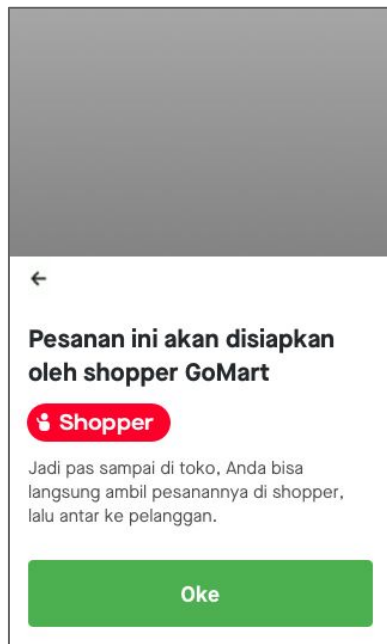

Due to the limited information in google map, many customers left the **delivery detail note** upon booking creation. Driver expect for the notes to be reflected as well in the consumer app.

Suggestion: To add customer's delivery detail notes in driver application.

In this page, drivers expect to see more information on “what” and “who” shopper is. The current information is still unclear especially for drivers with no shopper flow experience.

Some drivers perceived it as an instruction on where to pick the order rather than explanation on shopper concept.

Current Version

Suggestion

Who is Shopper

(i.e. Shopper is a Gojek partner who will do the shopping at store.)

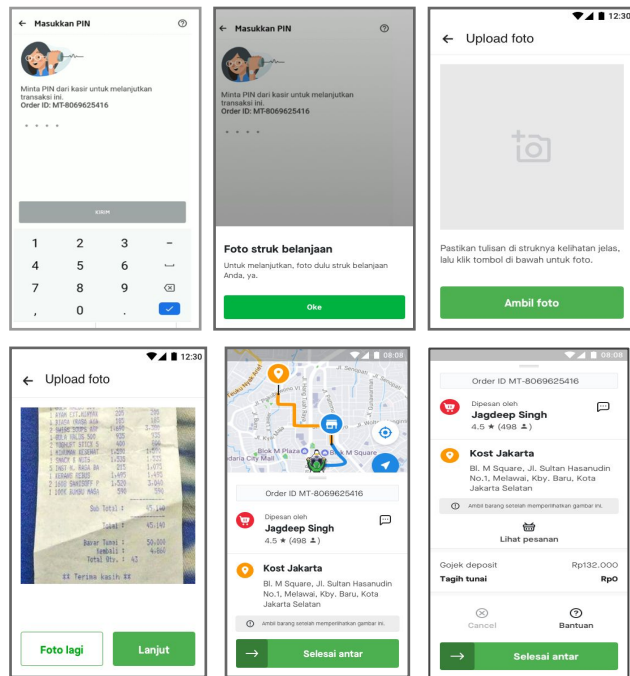

Checklist of instructions that driver need to do. For example:

- ☐ Come to your assigned shopper and pick the goods at the shopper booth
- ☐ No need to do transaction at cashier
- ☐ To input the PIN from shopper to validate the order

To start the explanation with “Who” shopper is

Continue the explanation with “What” - the things they need to do in shopper flow.

When the drivers were presented with the remaining screens, at first they did not realise on the absence of edit order feature. In general, they are okay with the flow. However, they expect the customers to be informed on this matter so they will not be blamed should there is any missing or wrong purchased item.

Edit Order Flow
(screens are based on the current design)

*“GoMart have to make a **clear note to customer** that in the case of missing or wrong purchased item, **customer should not blame the driver**. It is **shopper’s responsibility**.”*

Food for thought

Is driver not obliged anymore to ensure the order accuracy in shopper order flow?

Moreover, some drivers have concern should there will be two different scenarios; stores with **edit order*** and no edit order. They expect the process can be standardised to avoid human error.

Moreover, distinct edit instruction on order that require edit process is crucial because apparently some drivers still **do not realise** on the availability of the **current edit order feature**.

*"I do not know that currently we
can do edit order. Instead, I
always cancel the order although
not all of the items are OOS"*

Recommendation

**Pop up notification reminder for order that
requires edit process**

*Edit order will only be available in Alfa group stores

Way Forward

How Could We Improve The Shopper Flow Better?

Aside from the visual design that we tested during the research, we also explored other potential ways to improve the overall shopper flow

1. Focus on improving the shopper order concept understanding

Why it matters?

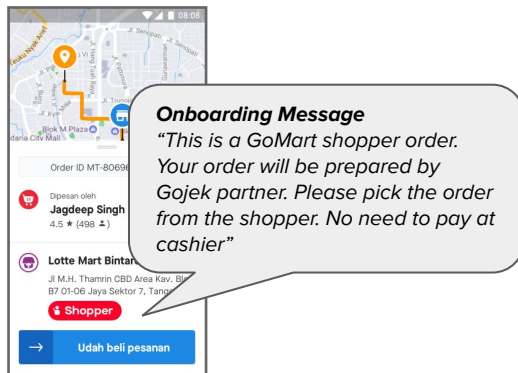

Because without a proper understanding, driver could processed it differently. The worst case scenario is they will go shopping by themself (just like in GoShop order) which can result into a double booking order.

Several potential ideas as follow:

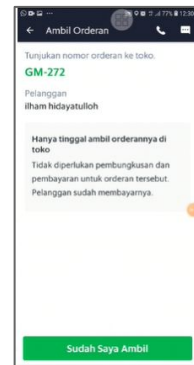

01. Boost awareness of the shopper order

I.e. driver comm, online-offline education

02. Onboarding message for shopper flow

I.e. pop up message to introduce shopper concept for first timer

03. Optimizing the "Shopper page information"

Reference: [GrapeMart](#). Detail recommendation can be found [here](#)

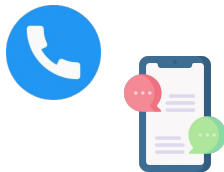

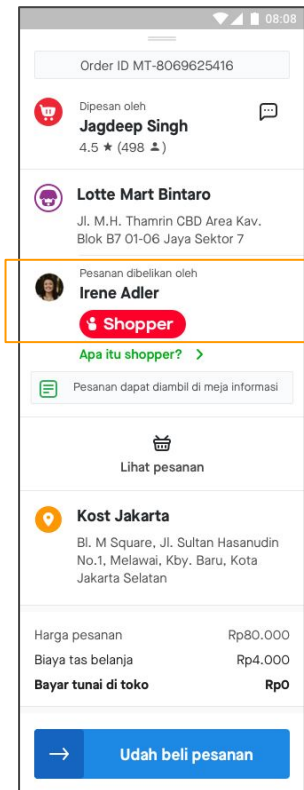

2. Delayed driver dispatch to shorten driver waiting time at store

For drivers, ideally, the order should be **dispatched to them not long after shopper has done collecting the items**. In the current process, during the peak hour driver could wait up to 1 hour at store.

Impact: Long waiting time = driver do not want to take GoMart order in supermarket = low BCR/ACR

3. Improving communication process between driver and shopper

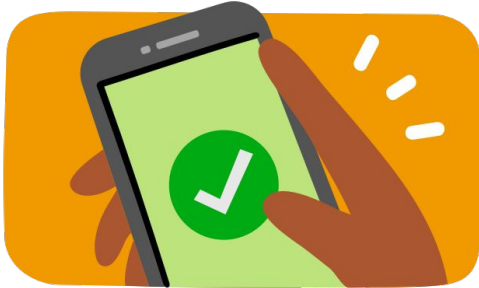

Aligned with the finding in [shopper research](#), drivers also mentioned the needs of having a **communication channel with shopper**.

This will help them to:

1. **Coordinate when to pick the order** - as mentioned in the [previous slide](#), during peak hour driver could wait up to 1 hour. By knowing this, they wish to manage the time better.
2. **To ensure that the order will not be cancelled** - since shopper directly in contact with the customer, OOS coordination mostly happen by the shopper. Sometimes the driver is already on the way to the supermarket (can be already inside the mall), but suddenly the order is cancelled by the shopper. Driver expect shopper could inform them as well.
3. **Coordinate on the order pickup location** - according to the previous shopper research, some malls will only allow driver to come from the back office gate which needs further coordination with driver.

4. Enable edit order process; to add or replace items (be it from the customer, shopper, or driver app)

Echoing the insights from previous customer and [shopper research](#), drivers also expect the **edit order feature to be developed soon**. Be it in the shopper or the driver app.

This will help **to reduce order cancellation request from customer** because in many cases OOS = leads to customer want to cancel the order.

Important Note:

As mentioned in the [previous slide](#), considering there will be two scenarios of editing order process, **“How might we help driver notice the two different processes?”** We should help them not to miss the order that require editing process.

5. To consider charging the parking fee for supermarket that located inside a mall to the customer

One of the concerns for drivers in taking order inside a mall is the **parking location and the fee**. Driver expect there will be a safe and dedicated parking spot for driver to ease the process.

Summary Recommendation

To summarise, we divided the recommendation into two areas;

(1) Screen Related Improvement

Mainly based on the issues arose during the concept/design testing process which focus on UX related issues.

(2) Shopper Flow Improvement

Other improvement aside from the screen component improvement that also influence the overall driver experience.

(1) Screen Improvement Recommendation

Screen	Area	Improvement Priority*	POTENTIAL RECOMMENDATION
Order Page	Shopper Logo	High	1. To connect the logo with “What Is Shopper” page 2. Add short text explanation of shopper concept 3. Pop up notification/onboarding message to explain shopper concept
	Store Location Information	Medium	Add the building name and floor
Order Detail Page	Prompt to “Apa Itu Shopper” page	High	Change the copy to be more intuitive. E.g. “ <i>Pelajari Tentang Shopper</i> ” or “ <i>Click Here To Learn About Shopper</i> ”
	Delivery Address Note	Medium	To add delivery detail notes from customer in the driver application.
	Cost Detail Information	Medium	To add information regarding the net income
Shopper Explanation Page	Shopper Concept Explanation	High	1. To start the explanation with “who” shopper is 2. Continue the explanation with “What” - the things they need to do in shopper flow.
Edit Order Page	Edit Order Requirement	Medium	To add pop up notification reminder for every order that requires edit process

*Disclaimer: priority improvement is based on analysis and suggestion from the research team

High = Issue that have major impact on order completion and high urgency

Medium = Issue that have major impact on order completion and lower urgency

(2) Shopper Flow Improvement Recommendation

Area	Issue	Improvement Priority*	POTENTIAL RECOMMENDATION
Driver Delayed Dispatch Allocation	Long driver waiting time at store	Medium	Delayed dispatch allocation after shopper finishing the order
Improving Communication process Between Driver and Shopper	Driver found difficulty to coordinate with shopper as there is no comm channel	Medium	Enable call or chat feature between shopper <> driver
Enable Edit Order Process	Customer tend to cancel the order when there is OOS as we could not replace the item	High	1. To enable edit order in the case of out of stock 2. To add pop up notification reminder for every order that requires edit process
Parking Spot And Fee	Finding a safe parking location outside the mall is a hassle, while parking inside is burdensome due to the high fee	Medium	To consider charging the parking fee to customer

*Disclaimer: priority improvement is based on analysis and suggestion from the research team

High = Issue that have major impact on order completion and high urgency

Medium = Issue that have major impact on order completion and lower urgency
