

Project Kaimono Sizing

Grocery Research Team | January - March 2021

nurfitriyana.r@go-jek.com

research
insights.

TL;DR

It is found that planned shoppers (people who have a regular schedule to shop groceries) and unplanned shoppers (people who do not have regular schedule; will shop groceries every time there is a need) are **almost 50:50 within the Gojek early and mature user ecosystem.**

Using the anchoring dimensions from the original Project Kaimono, planned shoppers can be segmented into 9 different types. **The suggestion is for GoMart to target Segment D and E, the medium spenders x high-to-medium shopping frequency in a month** (see [Slide 14](#) for details).

- The size of the exact Kaimono personas (i.e. Heavy Buyers, Convenience Seekers, Deal Hunters) is found to be extremely tiny due to **relatively low online grocery shopping adoption** in general.
- Therefore, when targeting Segment D and E, GoMart needs to convert offline shoppers as well, in addition to “stealing” other online grocery app users. More details about this recommendation, as well as other suggestions can be seen in [Slide 34-39](#).

Research Background

After finding three potential routine grocery shopper personas through [Project Kaimono](#), a research is needed to find the size of those personas in the Gojek user ecosystem, with the final objective of fine-tuning GoMart user acquisition targets

BUSINESS OBJECTIVES

Optimize user acquisition efforts by fine-tuning the consumer target segment.

RESEARCH OBJECTIVES

To identify the size of qualitative routine online grocery shopper personas.

For more details about the research plan and survey design, please visit this [document](#).

METHODOLOGY

In-App Survey

25 January - 10 February 2021

SAMPLE

Gojek Early, Mature 1, and Mature 2 users in the last 28 days (per 16 January 2020) in all GoMart service areas.

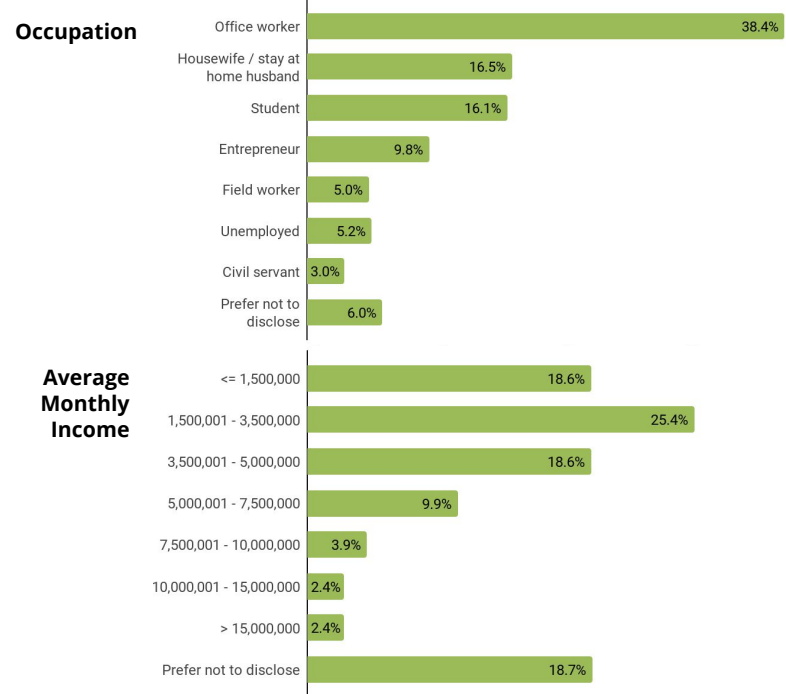

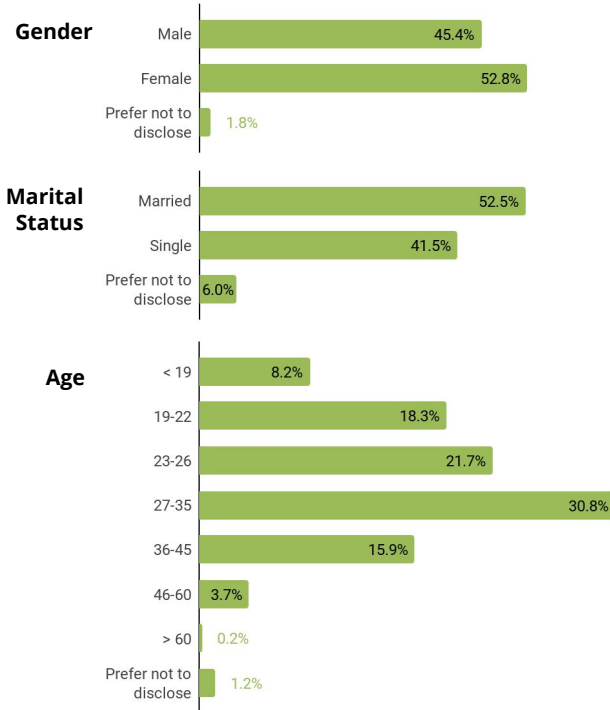

Population Size	Minimum Sample*
7,057,666	1,067

Respondents' Profile

All Sample Demographic Profile

Total respondents: 1,406

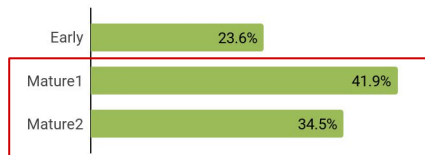

Level of confidence 95%, MoE 2-3%

All samples are mostly Gojek mature users residing in Jabodetabek, having decision making control over grocery shopping. When it comes to planning, planned vs unplanned shoppers are almost 50:50 in Gojek ecosystem.

Gojek User State

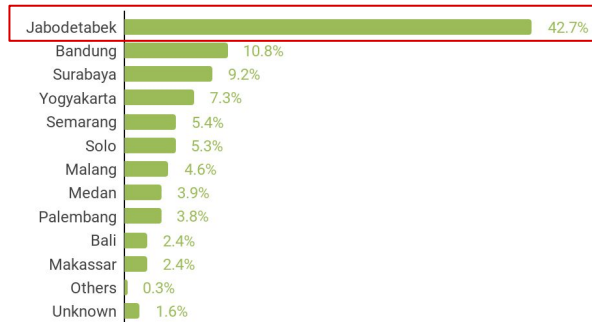

Per 16 January 2021 (N = 1,406)

For more context about Gojek user state, please visit this [document](#).

Domicile

Most common service area lifetime (N = 1,406)

Grocery Shopping Decision Making

Q: Which one is your role in doing grocery shopping at home? (N = 1,406)

Grocery Planning

Q: Which statement best describes your grocery shopping habit? (N = 1,406)

Planned shoppers are generally more mature in terms of age, and have higher monthly income.

Considering the size of unplanned shoppers in our ecosystem, **we will not only analyse the planned shoppers' data** (i.e. the main focus of Kaimono segmentation), **but also those of unplanned shoppers'.**

Planned vs Unplanned Shopper Demographic Profile

	Planned Shopper	Unplanned Shopper
Age	23-26 yo (23.7%) 27-35 yo (32%)	19-22 yo (29.6%) 27-35 yo (29.6%)
Gender	Female (51.8%)	Female (53.9)
Marital Status	Married (48.9%) Single (44.3%)	Married (56.1%) Single (38.8%)
Occupation	Office worker (46.6%) Housewife / stay at home husband (15.9%)	Office worker (30.3%) Students (20.4%)
Avg Monthly Income	1.5 - 3.5 mio (28%) 3.5 - 5 mio (22%)	<= 1.5 mio (22.3%) 1.5 - 3.5 mio (22.8%)
n	699	707

Planned Shoppers

Consumers who plan and have regular grocery shopping schedule

In the original Project Kaimono, we qualitatively segment planned online grocery shoppers by (1) total shopping frequency in a month and (2) biggest shopping's basket size.

They also have unique characteristics in executing big grocery, such as one-stop vs split shopping and preferred shopping destination.

Big Shopping Characteristics of Each Persona		
	Big Shopping Behaviour	Primary Shopping Destination
 Deal Hunter	Shop a smaller number of items in multiple checkouts	E-commerce
 Convenience Seeker	Shop a lot of items in a single checkout	Online grocery specialty app
 Heavy Buyer	Shop an abundant amount of items in a single checkout	Offline modern trade

Source: [Project Kaimono](#), Oct-Nov 2020

There are 63% of planned shoppers who have gone online for routine grocery shopping. This will be used as samples for our Kaimono segmentation going forward.

This is taking into account that the Kaimono personas are based on consumers who have shop online for any type of routine groceries.

**Online Penetration for
Routine Grocery Shopping**

n = 699

Online

(e.g. E-commerce, on-demand, grocery specialty apps)

% of respondents who already shop online for primary and/or secondary routine shopping, be it monthly, bi-weekly, weekly, and/or daily.

63.4%
(*n* = 443)

Offline

(e.g. Traditional market, offline modern trade and/or general trade)

% of respondents who purely shop offline for primary and secondary routine shopping, be it monthly, bi-weekly, weekly, and daily.

36.6%
(*n* = 256)

To get the anchoring dimensions, we estimate the total planned shopping frequency and the primary shopping spending that respondents have in a month, then group them into high, medium, and low categories. (1)

**Routine Shopping Occasion
Done in a Month**

Option in the Survey	Assumed Frequency in a Month
Monthly	1x
Bi-Weekly	2x
Weekly	4x
Daily	12x

Total Estimated Frequency (for Kaimono Sizing)

≥ 13x
38.1%

n = 443 100%

To get the anchoring dimensions, we estimate the total planned shopping frequency and the primary shopping spending that respondents have in a month, then group them into high, medium, and low categories. (2)

**Primary Shopping Spending
per Checkout (in IDR)**

Option in the Survey	Assumed Spending
< 200,000	100,000
200,000 - 500,000	350,000
500,001 - 1,000,000	750,000
1,000,001 - 2,000,000	1,500,000
2,000,001 - 3,000,000	2,500,000
> 3,000,000	3,000,000

Note: Primary shopping is the biggest planned grocery done in a month, based on the quantity of items bought in every occasion

Total Estimated Primary Shopping Spending (for Kaimono Sizing)

Total Primary Spending Assumed spending x assumed primary shopping frequency		%	Category	Total Primary Spending Assumed spending x assumed primary shopping frequency		%	Category
100,000	6%	Low ≤ 500,000 30.2%		2,500,000	5%	High > 2,000,000 12.9%	
200,000	1%			3,000,000	7%		
350,000	21%			4,200,000	0%		
400,000	2%			5,000,000	0%		
700,000	4%	Med 500,001 - 2,000,000 56.9%		6,000,000	1%	n = 443 100%	
750,000	27%						
1,200,000	3%						
1,400,000	5%						
1,500,000	19%						

Using the Kaimono anchoring dimensions alone, it can be seen from the segmentation that the medium spenders (segment D, E, and F) generally hold the largest potential in terms of size.

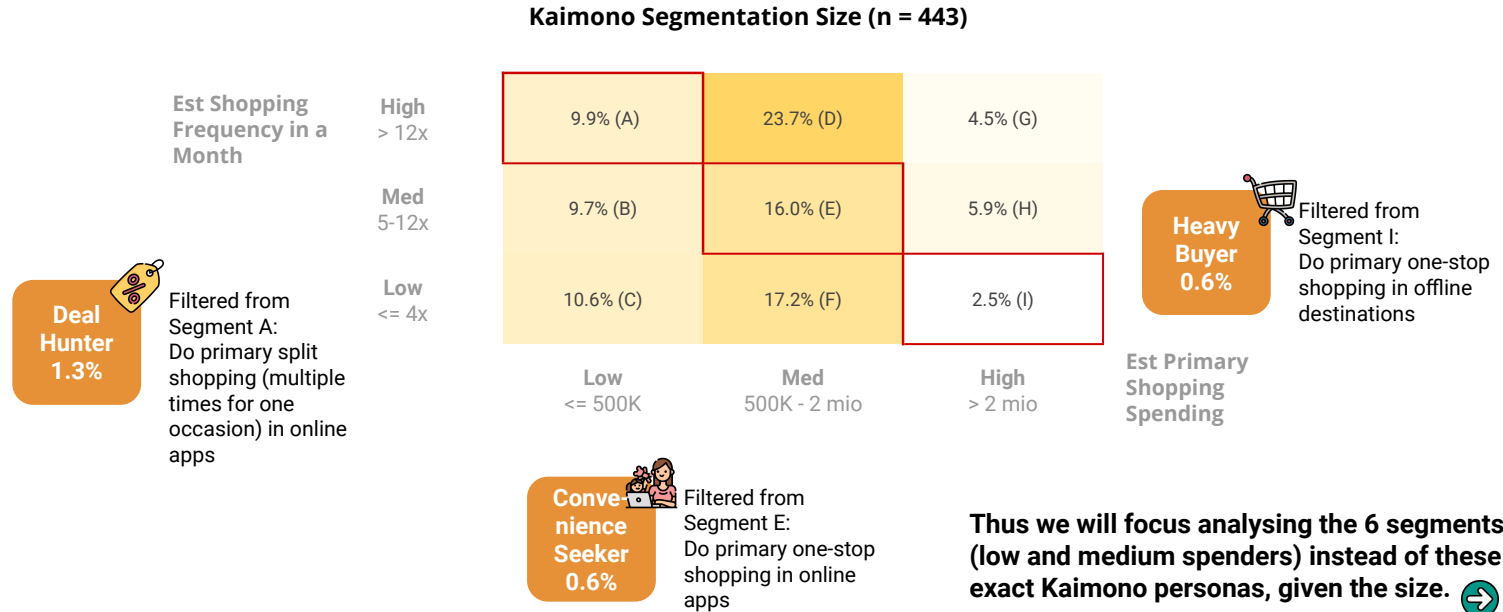

They are followed by segment A, B, and C, which are low spenders.

Kaimono Segmentation Size (n = 443)

Est Planned Shopping Frequency in a Month	High > 12x	9.9% (A)	23.7% (D)	4.5% (G)	Est Primary Shopping Spending
	Med 5-12x	9.7% (B)	16.0% (E)	5.9% (H)	
	Low ≤ 4x	10.6% (C)	17.2% (F)	2.5% (I)	
		Low ≤ 500K	Med 500K - 2 mio	High > 2 mio	

To see how we come up with the high, medium, and low parameters for each dimension, see [Slide 12-13](#).

We tried to further map the exact Heavy Buyer, Convenience Seeker, and Deal Hunter's size that lie within these 3x3 segments. However, they are found to be extremely tiny compared to the overall planned shopper sample.

Planned Shoppers Segment: Shopping Type and Occasions

Medium spenders in general are older than low spender; more tend to be already married, working, and have higher monthly income.

Segment D, E, and F might have bigger shopping needs than the rest, considering the possibility of having dependees. They also have higher buying power given the monthly income range.

Kaimono Segment's Demographic Profile

	A <i>HiFreq, LoSpend</i>	B <i>MedFreq, LoSpend</i>	C <i>LoFreq, LoSpend</i>	D <i>HiFreq, MedSpend</i>	E <i>MedFreq, MedSpend</i>	F <i>LoFreq, MedSpend</i>

n	44	43	47	105	71	76

Planned Shoppers Segment: Shopping Type and Occasions

Monthly shopping becomes a primary grocery schedule for all segments. In overall, they also purchase their needs from one store at once for this primary shopping.

Primary Shopping Type Done in a Month

Q: Amongst these different planned shopping occasions, which one is the biggest shopping that you do in a month? "Biggest" refers to the quantity of items bought in each transaction for that occasion.

	A HiFreq, LoSpend	B MedFreq, LoSpend	C LoFreq, LoSpend	D HiFreq, MedSpend	E MedFreq, MedSpend	F LoFreq, MedSpend
Monthly	90.9%	79.1%	95.7%	69.5%	78.9%	77.6%
Bi-weekly	0.0%	7.0%	4.3%	7.6%	11.3%	17.1%
Weekly	9.1%	14.0%	0.0%	12.4%	5.6%	5.3%
Daily	0.0%	0.0%	0.0%	10.5%	4.2%	0.0%
Total	100%	100%	100%	100%	100%	100%
n	44	43	47	105	71	76

Primary Shopping Breakdown

Q: Which statement best describes your behaviour when you do primary shopping?

One-stop shopping | I shop in one place at once

Split shopping | I shop in one place at different times / I shop in different places at once / I shop in different places at different times

	A HiFreq, LoSpend	B MedFreq, LoSpend	C LoFreq, LoSpend	D HiFreq, MedSpend	E MedFreq, MedSpend	F LoFreq, MedSpend
One-stop shopping	63.6%	53.5%	44.7%	56.2%	57.7%	68.4%
Split shopping	36.4%	46.5%	55.3%	43.8%	42.3%	31.6%
Total	100%	100%	100%	100%	100%	100%
n	44	43	47	105	71	76

Planned Shoppers Segment: Shopping Type and Occasions

All segments complement their primary shopping with secondary shopping occasions.

High and medium frequency shoppers tend to do secondary weekly and daily shopping, while low frequency shoppers only do secondary bi-weekly, or even no additional shopping at all.

Secondary Shopping Type Done in a Month

Q: Aside from the primary shopping, which are the other planned shopping types that you usually do in a month? (Multi-answer)

	A HiFreq, LoSpend	B MedFreq, LoSpend	C LoFreq, LoSpend	D HiFreq, MedSpend	E MedFreq, MedSpend	F LoFreq, MedSpend
Monthly	0.0%	7.0%	2.1%	5.7%	5.6%	9.2%
Bi-weekly	9.1%	9.3%	59.6%	7.6%	5.6%	34.2%
Weekly	9.1%	86.0%	0.0%	17.1%	90.1%	0.0%
Daily	100.0%	0.0%	0.0%	89.5%	0.0%	0.0%
No secondary shopping schedule	0.0%	0.0%	38.3%	0.0%	4.2%	56.6%
Total	118%	102%	100%	120%	106%	100%
n	44	43	47	105	71	76

Planned Shoppers Segment: Shopping Type and Occasions

They also normally shop ad-hoc 2-3x per month.

Segment C and F are seen to also shop in low frequency even for incidental use cases. On the other side, segment D tends to shop ad-hoc more often compared to the rest of the segments.

Ad-Hoc Shopping Frequency in a Month

Q: In general, how often do you shop for incidental / unplanned groceries in a month?

	A HiFreq, LoSpend	B MedFreq, LoSpend	C LoFreq, LoSpend	D HiFreq, MedSpend	E MedFreq, MedSpend	F LoFreq, MedSpend
0-1x	20.5%	27.9%	40.4%	14.3%	21.1%	31.6%
2-3x	61.4%	65.1%	40.4%	53.3%	60.6%	51.3%
4-5x	18.2%	7.0%	17.0%	26.7%	14.1%	13.2%
6-7x	0.0%	0.0%	2.1%	1.9%	2.8%	1.3%
> 7x	0.0%	0.0%	0.0%	3.8%	1.4%	2.6%
Total	100%	100%	100%	100%	100%	100%
n	44	43	47	105	71	76

Planned Shoppers Segment: Shopping Destination

Most people across segments still go offline for primary shopping, but some have started to use online apps as well.

In the latter case, on-demand and e-commerce are the top two online platform choices for consumers.

Primary Shopping Destination

Q: Where do you mainly shop primary grocery from?

	A HiFreq, LoSpend	B MedFreq, LoSpend	C LoFreq, LoSpend	D HiFreq, MedSpend	E MedFreq, MedSpend	F LoFreq, MedSpend
Sellers/vendors passing by in front of the house	0.0%	2.3%	2.1%	1.0%	0.0%	1.3%
Modern trade stores	72.7%	58.1%	63.8%	63.8%	71.8%	68.4%
General trade stores and/or traditional market	4.5%	11.6%	4.3%	9.5%	2.8%	5.3%
Fresh produce specialty app (e.g. Sayurbox, TaniHub)	0.0%	0.0%	2.1%	1.9%	0.0%	1.3%
Grocery specialty app (e.g. HappyFresh)	0.0%	0.0%	4.3%	1.0%	0.0%	0.0%
On-demand app (e.g. GoMart, GrabMart)	15.9%	18.6%	12.8%	12.4%	9.9%	5.3%
Official app of modern trade stores (e.g. Alfagift, KlikIndomaret)	0.0%	0.0%	0.0%	1.0%	2.8%	1.3%
E-commerce (e.g. Tokopedia, Shopee)	6.8%	9.3%	10.6%	9.5%	12.7%	15.8%
Chat messenger	0.0%	0.0%	0.0%	0.0%	0.0%	1.3%
Total	100%	100%	100%	100%	100%	100%
n	44	43	47	105	71	76

Planned Shoppers Segment: Shopping Destination

Most of those who shop additional bi-weekly (mainly segment C and F) also still go offline.

Again, it is followed by e-commerce and on-demand as the top shopping destinations for this occasion.

**Question was only asked to respondents who claim that they shop secondary bi-weekly. See [Slide 18](#) to see how many respondents claim this per segment.*

Secondary Bi-Weekly Shopping Destination

*Q: Where do you shop secondary bi-weekly grocery from? (Multi-answer)**

	A HiFreq, LoSpend	B MedFreq, LoSpend	C LoFreq, LoSpend	D HiFreq, MedSpend	E MedFreq, MedSpend	F LoFreq, MedSpend
Sellers/vendors passing by in front of the house	0.0%	0.0%	8.5%	1.0%	1.4%	1.3%
Modern trade stores	6.8%	7.0%	44.7%	6.7%	4.2%	22.4%
General trade stores and/or traditional market	4.5%	4.7%	10.6%	1.0%	4.2%	10.5%
Fresh produce specialty app (e.g. Sayurbox, TaniHub)	0.0%	2.3%	2.1%	0.0%	0.0%	1.3%
Grocery specialty app (e.g. HappyFresh)	0.0%	0.0%	4.3%	0.0%	0.0%	1.3%
On-demand app (e.g. GoMart, GrabMart)	0.0%	2.3%	17.0%	1.0%	0.0%	11.8%
Official app of modern trade stores (e.g. Alfagift, KlikIndomaret)	0.0%	0.0%	2.1%	1.0%	0.0%	1.3%
E-commerce (e.g. Tokopedia, Shopee)	6.8%	2.3%	21.3%	3.8%	1.4%	17.1%
Chat messenger	0.0%	0.0%	0.0%	0.0%	0.0%	0.0%
Social media	0.0%	0.0%	2.1%	0.0%	0.0%	0.0%
Total	18.2%	18.6%	112.8%	14.3%	11.3%	67.1%
n	44	43	47	105	71	76

Planned Shoppers Segment: Shopping Destination

Similar pattern is found in the secondary weekly shopping occasion.

E-commerce is less popular for segment B for this occasion. This is contrasting of segment E, who based on its demographic profile, might have more varied grocery assortment needs.

Secondary Weekly Shopping Destination

Q: Where do you shop secondary weekly grocery from? (Multi-answer)*

	A HiFreq, LoSpend	B MedFreq, LoSpend	D HiFreq, MedSpend	E MedFreq, MedSpend
Sellers/vendors passing by in front of the house	2.3%	9.3%	0.0%	9.9%
Modern trade stores	6.8%	58.1%	12.4%	52.1%
General trade stores and/or traditional market	2.3%	39.5%	4.8%	39.4%
Fresh produce specialty app (e.g. Sayurbox, TaniHub)	2.3%	0.0%	1.0%	1.4%
Grocery specialty app (e.g. HappyFresh)	0.0%	11.6%	1.0%	2.8%
On-demand app (e.g. GoMart, GrabMart)	2.3%	27.9%	4.8%	25.4%
Official app of modern trade stores (e.g. Alfagift, KlikIndomaret)	0.0%	4.7%	1.9%	1.4%
E-commerce (e.g. Tokopedia, Shopee)	2.3%	11.6%	4.8%	39.4%
Chat messenger	0.0%	0.0%	1.9%	1.4%
Social media	0.0%	0.0%	0.0%	1.4%
Total	18.2%	162.8%	32.4%	174.6%
n	44	43	105	71

*Question was only asked to respondents who claim that they shop secondary weekly. See [Slide 18](#) to see how many respondents claim this per segment.

Planned Shoppers Segment: Shopping Destination

Only high frequency shoppers do additional daily shopping. They mainly go to modern and general trade stores, followed by on-demand apps.

Unlike the previous secondary shopping occasions, e-commerce is rarely used for this shopping type.

**Question was only asked to respondents who claim that they shop secondary daily. See [Slide 18](#) to see how many respondents claim this per segment.*

Secondary Daily Shopping Destination

*Q: Where do you shop secondary daily grocery from?**

	A HiFreq, LoSpend	D HiFreq, MedSpend
Sellers/vendors passing by in front of the house	4.5%	9.5%
Modern trade stores	36.4%	26.7%
General trade stores and/or traditional market	38.6%	32.4%
Grocery specialty app (e.g. HappyFresh)	0.0%	1.0%
On-demand app (e.g. GoMart, GrabMart)	15.9%	12.4%
Official app of modern trade stores (e.g. Alfagift, KlikIndomaret)	2.3%	1.0%
E-commerce (e.g. Tokopedia, Shopee)	2.3%	6.7%
Total	100%	89.5%
n	44	105

Planned Shoppers Segment: Shopping Destination

Meanwhile, sellers/vendors (“tukang sayur”), on-demand, and e-commerce gain major popularity for ad-hoc shopping use case.

Far more % of respondents go to these destinations across segments, compared to the other planned shopping occasions.

Ad-Hoc Shopping Destination

Q: Where do you shop incidental grocery from? (Multi-answer)

	A HiFreq, LoSpend	B MedFreq, LoSpend	C LoFreq, LoSpend	D HiFreq, MedSpend	E MedFreq, MedSpend	F LoFreq, MedSpend
Sellers/vendors passing by in front of the house	61.4%	53.5%	53.2%	42.9%	45.1%	56.6%
Modern trade stores	40.9%	39.5%	29.8%	32.4%	28.2%	19.7%

n	44	43	47	105	71	76

Planned Shoppers Segment: Shopping Consideration

Each shopping type / occasion has its own top considerations.

For example, consumers from all segments take into account the SKU breadth factor for primary shopping.

Meanwhile, distance is something that they seek more for secondary weekly and daily shopping.

Consideration in Choosing Shopping Destinations

Q: What are your main considerations in choosing where to shop from for across shopping occasion? (Multi-answer)

Interesting promo and/or discounts

Close distance to home

Wide assortment; can buy all grocery needs in one place

Good item quality

Convenience; time and effort saving

Competitive item price

Cheap shopping cost

Ease in carrying or delivering the groceries to home

Can grocery shop while spending quality time alone or with family

Safety in carrying or delivering the groceries to home

Unique assortment; can find items not commonly sold in the market

	Primary Shopping	Secondary Bi-Weekly	Secondary Weekly	Secondary Daily
Interesting promo and/or discounts	51.8%	53.8%	52.1%	35.5%
Close distance to home	31.3%	32.9%	49.2%	56.5%
Wide assortment; can buy all grocery needs in one place	47.7%	32.9%	35.2%	31.9%
Good item quality	33.9%	39.2%	39.8%	43.5%
Convenience; time and effort saving	32.9%	37.8%	44.5%	37.7%
Competitive item price	26.4%	27.3%	33.5%	29.7%

Planned Shoppers Segment: Shopping Consideration

Consideration of promo is generally ever-present. Offline destinations are tied more closely to wide assortment and close distance, whereas online destinations are to convenience. This pattern is observed in almost all shopping occasions.

Example: Consideration in Choosing Primary Shopping Destination

Q: What are your main considerations in choosing where to shop from for primary shopping? (Multi-answer)

Shopping Destination	Sellers / vendors	Modern trade	General trade	Fresh produce specialty	Grocery specialty	On-demand	Official app of offline MT	E-commerce	Chat messenger	Social media
Q: What are your main considerations in choosing where to shop from for primary shopping? (Multi-answer)										
Interesting promo and/or discounts	0.0%	50.6%	40.0%	50.0%	33.3%	66.7%	75.0%	55.8%	0.0%	0.0%

Unplanned Shoppers

Consumers who do not have regular grocery shopping schedule;
will shop every time the need arises

There are 64.6% of unplanned shoppers who have shop grocery online. The number is closely similar to the planned shoppers'.

We will analyse all unplanned shoppers data; both unplanned online and offline, without segmenting them further.

Online Penetration for Unplanned Shoppers

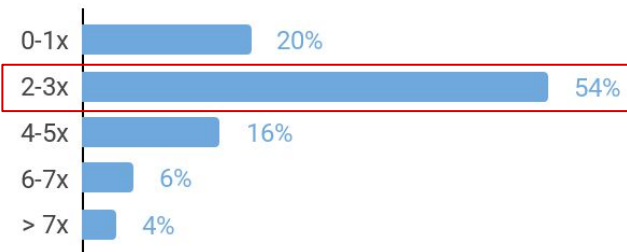

n = 707

Online (e.g. E-commerce, on-demand, grocery specialty apps) <i>% of respondents who already shop online for their grocery.</i>	64.6% (n = 457)
Offline (e.g. Traditional market, offline modern trade and/or general trade) <i>% of respondents who purely shop offline for their grocery.</i>	35.4% (n= 250)

Most unplanned shoppers purchase grocery 2-3x per week, and spend IDR 50-200K per checkout when buying from their main grocery shopping destination.

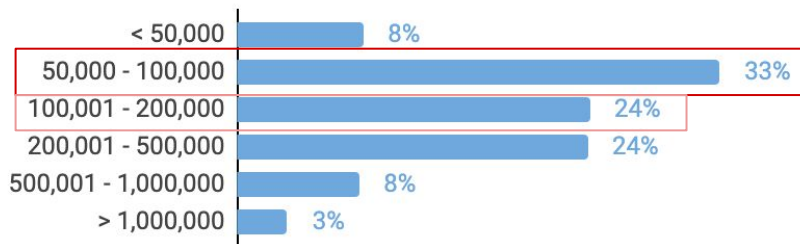

Average Shopping Frequency in a Week

Q: In average, how many times do you grocery shop in a week? (n = 707)

Average Spending per Checkout in the Main Shopping Destination

Q: In average, how much do you spend for grocery when shopping from your main destination, in every transaction?

Unplanned Shoppers Segment: Shopping Destination

On-demand app is not exactly as popular for unplanned shoppers.

While modern and general trade stores remain dominant followed by e-commerce (similar to the planned shoppers' pattern), on-demand adoption in general is still lower than traditional sellers/vendors.

Shopping Destinations

Q1: Where do you mainly shop grocery from?

Q2: Aside from the main destination, what is your 2nd grocery destination choice?

Q3: Aside from the main and 2nd destination, what is your 3rd grocery destination choice?

	Main Destination	2nd Destination	3rd Destination
Modern trade stores	48.2%	24.2%	8.4%
General trade stores and/or traditional market	29.6%	22.3%	15.5%
E-commerce (e.g. Tokopedia, Shopee)	9.3%	20.9%	12.8%
Sellers/vendors passing by in front of the house	2.8%	12.2%	18.0%
On-demand app (e.g. GoMart, GrabMart)	6.8%	8.9%	10.8%
Official app of modern trade stores (e.g. Alfagift, KlikIndomaret)	1.0%	1.7%	2.6%
Chat messenger	1.0%	1.8%	1.4%
Grocery specialty app (e.g. HappyFresh)	0.6%	0.7%	2.7%

Social media	0.4%	0.4%	1.1%
No other 2nd or 3rd shopping destinations	0.0%	5.8%	26.1%
Total	100%	100%	100%
n	746	746	704

Unplanned Shoppers Segment: Shopping Consideration

Close distance is seen as the biggest decision making factor in choosing offline destinations, whereas promo and convenience are in choosing online platforms. The fact that close distance is a major consideration is also similar to planned shoppers' [weekly/daily shopping consideration pattern](#).

Example: Consideration in Choosing Main Shopping Destination

Q: What are your main considerations when choosing your main grocery shopping destination in a week? (Multi-answer)

	Sellers / vendors	Modern trade	General trade	Fresh produce specialty	Grocery specialty	On-demand	Official app of offline MT	E-commerce	Chat messenger	Social media
Close distance to home	65.0%	49.9%	62.7%	50.0%	50.0%	16.7%	42.9%	7.6%	0.0%	14.3%
Interesting promo and/or discounts	5.0%	50.4%	20.6%	0.0%	0.0%	68.8%	57.1%	65.2%	33.3%	71.4%
Wide assortment; can buy all grocery needs in one place	20.0%	52.8%	38.3%	50.0%	50.0%	18.8%	28.6%	33.3%	33.3%	0.0%
Convenience; time and effort saving	40.0%	25.2%	25.4%	50.0%	50.0%	56.3%	42.9%	51.5%	33.3%	42.9%
Good item quality	15.0%	32.8%	31.1%	50.0%	0.0%	31.3%	28.6%	15.2%	33.3%	42.9%
Competitive item price	20.0%	21.7%	27.3%	0.0%	25.0%	8.3%	14.3%	34.8%	0.0%	0.0%
Cheap shopping cost	30.0%	15.0%	22.5%	0.0%	25.0%	31.3%	14.3%	37.9%	0.0%	14.3%
Can grocery shop while spending quality time alone or with family	10.0%	16.4%	7.2%	0.0%	25.0%	12.5%	0.0%	7.6%	0.0%	0.0%
Ease in carrying or delivering the groceries to home	15.0%	7.6%	11.0%	0.0%	25.0%	10.4%	14.3%	9.1%	33.3%	14.3%
Safety in carrying or delivering the groceries to home	10.0%	5.3%	3.3%	0.0%	0.0%	29.2%	0.0%	10.6%	0.0%	28.6%
Unique assortment; can find items not commonly sold in the market	15.0%	7.3%	2.4%	0.0%	0.0%	2.1%	0.0%	15.2%	0.0%	14.3%

n	20	341	209	2	4	48	7	66	3	7

Greyed out destinations have a small number of n, that it makes it highly unrepresentative to the population.

Although they shop every time a need arises, home cleaning products and daily staples (e.g. rice, cooking oil, sugar, instant noodles) usually has a more “stable” shopping schedule for unplanned shoppers.

Items with a More Planned Shopping Schedule

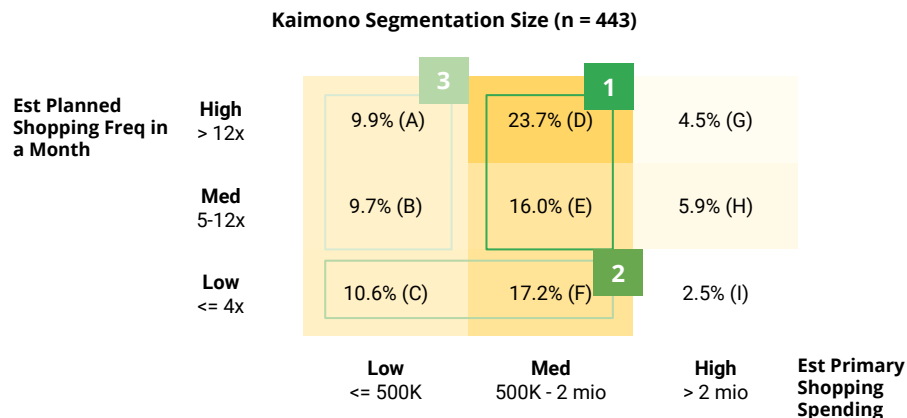

Q: Of all grocery items below, which items whose shopping process is usually more planned for you? i.e. Usually has a fixed purchase schedule (n = 707)

Recommendations

The suggestion for GoMart is to mainly target segment D and E of planned shoppers.

However, other segments still have potentials to be captured. Segment C and F can come as 2nd priority, whereas segment A and B comes 3rd.

Why Segment D and E?

- 1 Size** | Segment D and E have big slices of the cake. Segment D is even the biggest in terms of size
- 2 Spending** | Both segments tend to have higher monthly income, thus have higher AOV / spending opportunity for both primary and secondary grocery shopping.
- 3 Shopping Frequency** | Both also have high frequency potentials. While both tend to do monthly primary shopping..
 - segment D top it with additional daily shopping, and relatively more frequent ad-hoc trips;
 - segment E with additional weekly grocery.

To see the demographic profile of each segment, go back to [Slide 16](#).

The quickest win is to capture the secondary weekly shopping of segment E, given its size and higher online penetration.

Although segment D holds the biggest potential in terms of segment size, higher effort might be required to convert more of them into online shoppers, both for their primary and secondary shopping occasions.

Prio	Segment	Primary Shopping		Secondary Shopping		Ad-Hoc 30-50% Online Penetration
		Dominant Occasion & Spending	Online Penetration	Dominant Occasion	Online Penetration	
1	Segment D n = 105	Monthly (69.5%) 200K - 2 mio	12.4% on-demand 9.5% e-commerce	Daily (89.5%)	12.4% on-demand 6.7% e-commerce	2-3x (53.3%) 4-5x (26.7%)
	Segment E n = 71	Monthly (78.9%) 200K - 2 mio	9.9% on-demand 12.7% e-commerce	Weekly (90.1%)	25.4% on-demand 39.4% e-commerce	2-3x (60.6%)

A lot of customers across segments already shop online (mainly on-demand and e-commerce) for ad-hoc.

This online ad-hoc penetration can be **a gate for customers to try using the online app for a more routine use case.**

For the next prio, we need to maximize tapping into all of segment C and F shopping occasions, given that they do not shop that often (i.e. either bi-weekly or no additional shopping at all).

Next would be segment A and B. Previous research suggests that these segments tend to be more price sensitive compared to others; small basket size might be not worth it purchased online without promo. Therefore, we better target their primary or biggest shopping occasion.

Prio	Segment	Primary Shopping		Secondary Shopping		Ad-Hoc 30-50% Online Penetration
		Dominant Occasion & Spending	Online Penetration	Dominant Occasion	Online Penetration	
2	Segment F n = 76	Monthly (77.6%) 200K - 2 mio	5.3% on-demand 15.8% e-commerce	Bi-weekly (34.2%)	11.8% on-demand 17.1% e-commerce	2-3x (51.3%)
	Segment C n = 41	Monthly (95.7%) <= 200k	12.8% on-demand 10.6% e-commerce	Bi-weekly (59.6%)	17% on-demand 21.3% e-commerce	0-1x (40.4%) 2-3x (40.4%)
3	Segment B n = 43	Monthly (79.1%) <= 200K	18.6% on-demand 9.3% e-commerce	Weekly (86%)	17.9% on-demand 11.6% e-commerce	2-3x (65.1%)
	Segment A n = 44	Monthly (90.9%) <= 200K	15.9% on-demand 6.8% e-commerce	Daily (100%)	15.9% on-demand 2.3% e-commerce	2-3x (61.4%)

Two alternatives to get consumers into GoMart: converting those who still shop offline, and onboarding those who have used other online apps.

Another option is to deep dive the the target segments' Gojek behaviour, to find potential acquisition opportunities and initiatives.

Converting Offline Shoppers

→ Catering to their needs for each shopping occasion, aside from the ever-present promo

1 Monthly Primary Shopping

Top Needs | Assortment, Item Quality

Ideas | Onboard more modern trade merchants, surface top brands

2 Bi-Weekly Secondary Shopping

Top Needs | Convenience, Item Quality

Ideas | Increase modern trade merchant density, surface top brands

3 Weekly Secondary Shopping

Top Needs | Distance, Convenience

Ideas | Onboard general trade on top of modern trade merchant, increase merchant density

4 Daily Secondary Shopping

Top Needs | Distance, Item Quality

Ideas | Onboard general trade merchant or merchant specialized in fresh produce, increase merchant density, fresh item quality guarantee

Onboard More Online Shoppers to GoMart

→ Improve what GoMart is still lacking in comparison to e-commerce (i.e. the dominant online grocery platform aside from on-demand)

1 Assortment, especially unique items

2 Competitive item price and service cost

→ Find potential GoMart acquisition initiatives in the Gojek ecosystem

We can **analyse the target segments' Gojek profile and behaviour**; Gojek services they normally use, order frequency, average order value, etc.

From that point, we can further explore potential initiatives to onboard them into GoMart.

When customers mainly consider distance for both planned and unplanned shopping, having outlets that are too close to the customers' location might backfire. In this case, GoMart needs to think for ways to make shopping from a very nearby store still worth it to be done online.

This might be particularly applicable to secondary weekly, secondary daily, and unplanned grocery shopping.

Findings from previous research

"My basket size when doing (weekly/daily) grocery shopping is small, so I might as well just shop in person from the nearest Alfamart."

Source: [Project Kaimono](#), Oct-Nov 2020

"There is an Alfamart store just in front of my house' alley. Using GoMart might be convenient, but if it's not urgent, I can just walk there and shop by myself."

Source: *Homepage Onboarding (upcoming report)*

How might we..

design an effective pricing strategy or initiative for GoMart

so that

customers can shop groceries online from their nearby preferred stores with more ease, and with efficient cost, using our product?

Some ideas:

- Delivery fee subscription
- Merge item price and delivery/service fee to minimize costly perception

While unplanned shoppers' grocery pattern can be unpredictable, GoMart may onboard more daily staples and cleaning products, since these are the most “planned” grocery items they usually purchase.

Thank you
