Research Background & Methodology

Background

- GoMart has been launched since the end of 2019. As the business keeps growing and being a complex online to offline service which involves interactions of multiple actors, we need frameworks to collect customer feedback and ensure service quality.

Research Objectives

- To measure the overall product satisfaction level of existing customers.
- To understand our performance in specific features within customers' entire experience with the product.
- Above all, this study would like to establish uniform approaches and measurement procedures, which will result in more useful, meaningful customer satisfaction information.

Research Background & Methodology

Research Method

CSAT - a study to measure overall satisfaction for each product and also give understanding on our specific performance in each journey.

Survey Approach:

- The survey is sent through push notification (PN) Gojek app **30 mins after the order is completed** (automatic event-triggered).
 - Customer will only get GoMart CSAT survey once in every three months, not including GoFood CSAT respondent.
 - GoMart CSAT study is conducted on quarterly basis.
-
- February cycle survey period : 5 - 28 February 2021
 - Total respondents **N = 582** (nationwide customer)

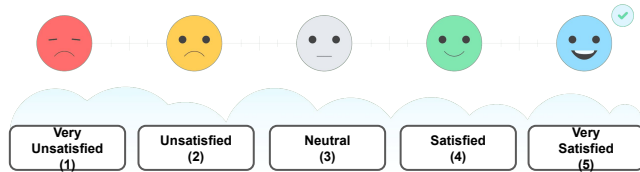

Survey Performance Matrix	Performance
PN Sent To Customer With Completed Order	44,257
PN Clicked	1,916
Completed Response (Final sample size)	582
Click Rate	4.33%
Response Rate	1.32%*

**Please note that with low response rate, we might get responses from those who are highly engaged with Gojek.*

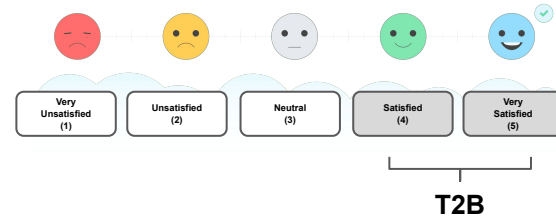

Survey Design - Measuring Satisfaction

There are two types of questions asked in this study; (a) level of satisfaction and (b) important attribute(s) in online grocery shopping. Below is how the satisfaction questions (a) and analysis looks like;

How satisfied are you with our service?

How to measure performance score of attributes?

Customer satisfaction is evaluated in **three stages** :

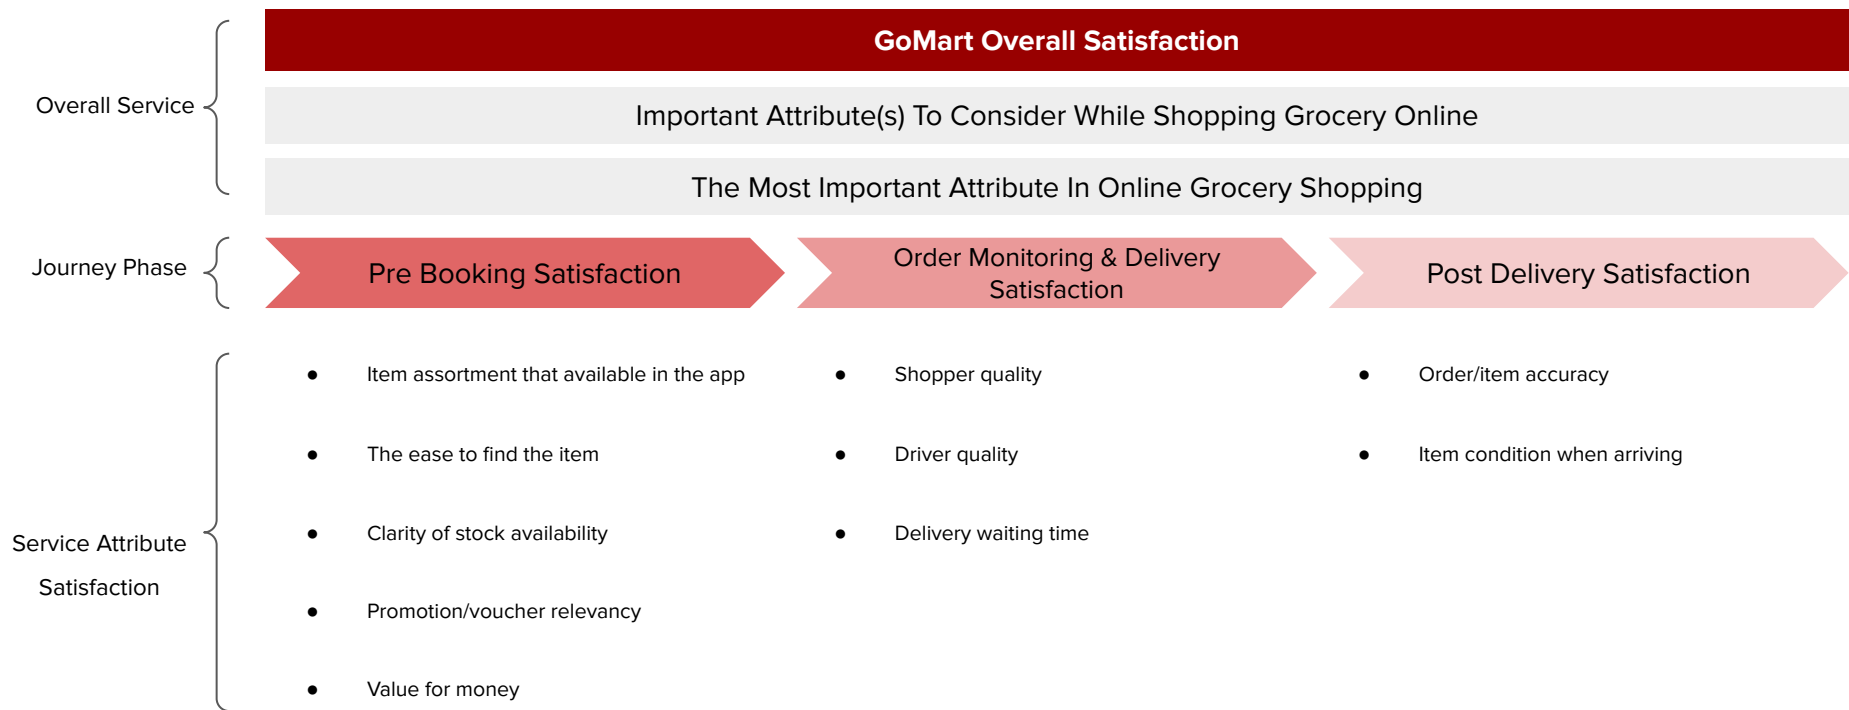

1. Overall satisfaction (to GoMart)
2. Satisfaction to Journey Processes (Pre-Booking, Order Monitoring & Delivery, and Post Delivery)
3. Satisfaction to attributes in each journey (total of 10 attributes)

Top 2 Box (T2B)

The Top 2 Box score is simply the percentage of respondents who selected either the top box (Very satisfied) or the second box (Satisfied) response.

[More details about Top 2 Box](#)

Bellow is the questionnaire flow & touchpoint of user journey that we measure..

Link to Questionnaire: [here](#)

The sample proportion in this research resemble the actual GoMart customer population proportion, which means the CSAT result depicts the real satisfaction situation.

City	Sample Proportion
JABODETABEK	38%
SURABAYA	22%
MALANG	7%
BANDUNG	6%
YOGYAKARTA	6%
PALEMBANG	5%
MEDAN	4%
SEMARANG	4%
SOLO	3%
MAKASSAR	3%
BALI	1%

Store Location	Sample Proportion	February Population Proportion
Alfamart	72%	69%
Alfamidi	26%	25%
Lotte Mart	1%	2%
Prima Freshmart	1%	1%
The FoodHall	0.3%	1%
Watsons	0.2%	1%

User State Profile**	CSAT Sample Proportion	February Population Proportion
Early	71%	68%
Mature 1	22%	18%
Mature 2	6%	11%
Untouched	N/A	2%
New Sign Up	N/A	0.30%
Occasional 1	N/A	0.10%
Occasional 2	N/A	0.10%
Soft Churn	N/A	0.10%
Hard Churn	N/A	0.30%

Note:

**Sample proportion here is based on the actual profile of respondent that filled in the survey. We did not specifically targeting a certain demographic/respondent segment due to small population size. There is no significant difference in the sample proportion and actual population proportion.*

****The user state** used here is based on February 2021 cycle, the status from 1 week after the transaction & survey filled in date. More information about GoMart User State: [here](#)

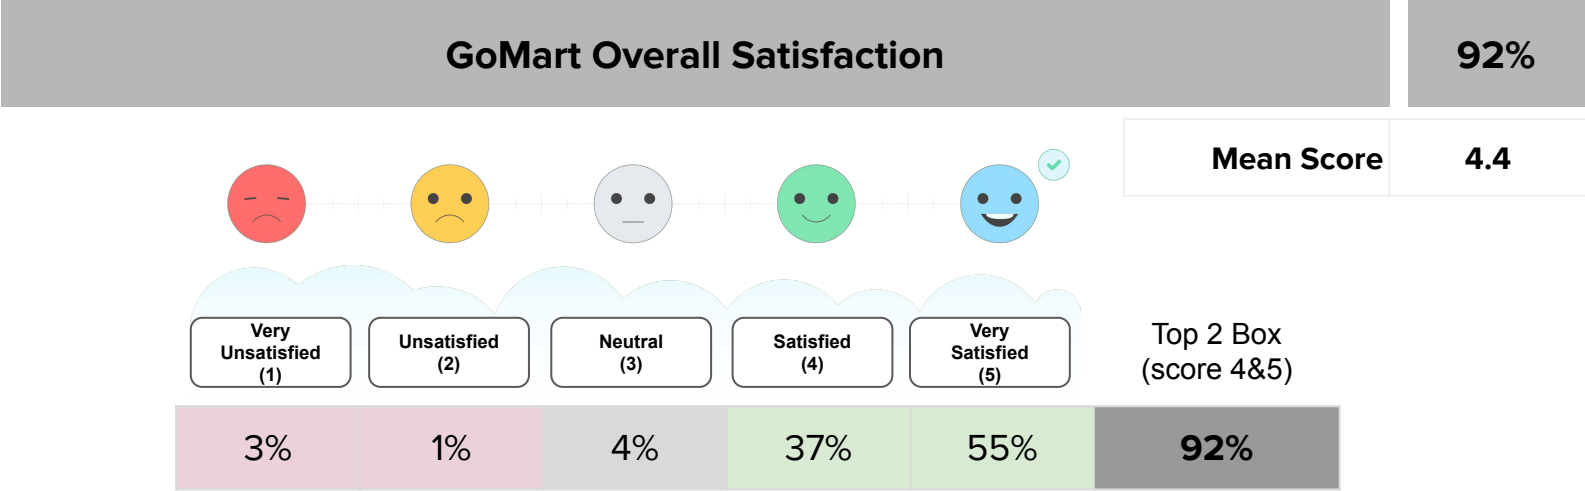

TL;DR

- During February 2021 service cycle, majority of GoMart users were **satisfied with GoMart services (92%), with 55% users said they were very satisfied**. This high satisfaction was shared across user types, shopping locations, and user journey.
 - When deciding to use online grocery shopping, the most important aspects for users were **‘the item condition when arriving (post-booking journey)’**, followed by **‘clarity of stock (pre-booking journey)’** and **‘value for money (pre-booking journey)’**.
- While many of the pre-booking aspects were considered to be important for overall customer experience, evaluation towards **GoMart Pre-booking aspects were generally lower**. The lowest customer satisfaction were shared regarding **our pricing**, where only 66% of customers perceived their GoMart experience as value for money.
- Moving forward, GoMart could maintain the high level of customer satisfaction by :
 - Maintaining our strength - ‘Good Item Condition When Arriving’
 - Improving our performance in;
 - Better clarity of Stock Availability,
 - More Value For Money service >> better pricing strategy
 - Easier To Find Item

Satisfaction Score Result

In this section we will deep dive GoMart overall satisfaction score.

Overall, 92% of GoMart users were satisfied with their experience using our service. In fact, 55% were very satisfied with GoMart.

Looking at the user state, majority of the respondents are from the 'early' segment. High satisfaction score was shared by 'early' and 'mature' segments.

By far, there is no significant difference on satisfaction score between the segments.

GoMart Overall Satisfaction Per User State Segment*				
	Total	Early	Mature 1	Mature 2
Overall Satisfaction T2B Score (%)	92%	92%	93%	89%
Overall Satisfaction - Mean CSAT	4.4	4.4	4.4	4.3
Total Respondent	582	416	130	36

Note:

**Since we did not set the user state as sampling criteria, the segment proportion is not well distributed. The user state used in here is based on February 2021 cycle, the status from 1 week after the transaction & survey filled in date. More information about GoMart User State: [here](#)*

Both customer that shopped in Alfamart or Alfamidi shared a high satisfaction for GoMart.

GoMart Satisfaction Based On Booking Store Location							
	Total	Alfamart	Alfamidi	Lotte Mart*	Prima Freshmart*	The FoodHall*	Watsons*
Overall Satisfaction T2B Score (%)	92%	92%	93%	100%	83%	100%	100%
Overall Satisfaction - Mean CSAT	4.4	4.4	4.5	4.3	4.0	5.0	4.0
Total Respondent	582	419	150	4*	6*	2*	1*

Note on red color:

**Since we did not set the store location as sampling criteria, the segment proportion is not well distributed. Small base size (N <30), read with caution*

Which Touchpoints in Online Grocery Shopping Are Important to Users?

Survey Design - Measuring Importance

As mentioned [earlier](#), aside from calculating the satisfaction score performance we also measure the impact of each attribute to the overall satisfaction. The process is as follows;

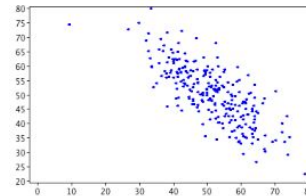

Which aspect is important in online grocery shopping?

* 5. Berikut ini adalah beberapa hal yang orang-orang anggap penting dalam memilih suatu layanan belanja kebutuhan rumah tangga online. **Mana sajakah yang menurut Anda penting?** (Bisa memilih lebih dari satu jawaban)

- | | |
|--|---|
| ☐ Keragaman pilihan barang | ☐ Kualitas asisten belanja (shopper) |
| ☐ Kemudahan menemukan barang | ☐ Kualitas pengemudi/pengantar pesanan |
| ☐ Kejelasan ketersediaan barang | ☐ Waktu tunggu hingga pesanan sampai |
| ☐ Kesesuaian promosi/diskon | ☐ Kesesuaian barang yang diterima |
| ☐ Harga yang ditawarkan | ☐ Kondisi barang yang diterima |

Customer can select multiple attributes that they consider as important in online grocery shopping.

How to measure importance of attributes?

(1) Derived Importance - Spearman Rho

- * 5. Berikut ini adalah beberapa hal yang orang-orang anggap penting dalam memilih suatu layanan belanja kebutuhan rumah tangga online. **Mana sajakah yang menurut Anda penting?** (Bisa memilih lebih dari satu jawaban)
- | | |
|--|---|
| ☐ Keragaman pilihan barang | ☐ Kualitas asisten belanja (shopper) |
| ☐ Kemudahan menemukan barang | ☐ Kualitas pengemudi/pengantar pesanan |
| ☐ Kejelasan ketersediaan barang | ☐ Waktu tunggu hingga pesanan sampai |
| ☐ Kesesuaian promosi/diskon | ☐ Kesesuaian barang yang diterima |
| ☐ Harga yang ditawarkan | ☐ Kondisi barang yang diterima |

(2) Stated Importance - Important Attribute Question

Coefficient Importance Index

To obtain the coefficient importance score, we combined the score of (1) spearman rho correlation (derived importance) with (2) the result of important attribute question (stated importance).

Based on this, we can rank the attribute based on its importance in influencing the overall customer satisfaction towards GoMart to map the prioritisation matrix.

For customers, the most important factors in Online Grocery Shopping was '**item condition when arriving**', followed by '**clarity of stock**' and '**value for money**'. In general, Post-delivery & Pre-booking journey were more important in driving satisfaction..

It is advised to take into consideration this factor as well in deciding which should be improved first.

More important to drive overall GoMart satisfaction ↑

Journey Phase	Service Attributes	Coefficient Importance
Post-delivery	Item condition when arriving	0.1137
Pre-booking	Clarity of stock availability	0.1105
Pre-booking	Value for money	0.1060
Pre-booking	The ease to find the item	0.1049
Post-delivery	Order/item accuracy	0.1022
Pre-booking	Promotion/voucher relevancy	0.1010
Pre-booking	Item assortment that available in the app	0.0982
Order monitoring & delivery	Driver quality	0.0944
Order monitoring & delivery	Delivery waiting time	0.0891

How To Improve GoMart Customer Satisfaction?

Given the various touch points that we measured and its contribution in driving the overall satisfaction, which aspect should be prioritised first?

High satisfaction towards GoMart service was shown across user journey. However, customer satisfaction in **Pre-booking** journey was lower, compared to Order Monitoring & Post-delivery.

Overall Journey T2B Satisfaction Score

Pre-Booking Satisfaction

Very Unsatisfied (1)	2%
Unsatisfied (2)	2%
Neutral (3)	7%
Satisfied (4)	41%
Very Satisfied (5)	49%
Top 2 Box Score (4&5)	90%

Order Monitoring & Delivery Satisfaction

Very Unsatisfied (1)	1%
Unsatisfied (2)	1%
Neutral (3)	4%
Satisfied (4)	37%
Very Satisfied (5)	57%
Top 2 Box Score (4&5)	94%

Post-Delivery Satisfaction

Very Unsatisfied (1)	2%
Unsatisfied (2)	1%
Neutral (3)	4%
Satisfied (4)	36%
Very Satisfied (5)	57%
Top 2 Box Score (4&5)	93%

Looking into the details, all of the attributes in Pre-booking journey were relatively low. With the lowest satisfaction score on **value for money**.

With this, we might want to re-evaluate again our pricing offering.

More important to driver overall GoMart satisfaction ↑	Pre Booking 90%		Order Monitoring & Delivery 94%		Post Delivery 93%	
	Service Attributes	% T2B Satisfaction	Service Attributes	% T2B Satisfaction	Service Attributes	% T2B Satisfaction
	Clarity of stock availability	74%	Driver quality	93%	Item condition when arriving	91%
	Value for money*	66%	Delivery waiting time	83%	Order/item accuracy	89%
	The ease to find the item	77%	Shopper quality**	100%		
	Promotion/voucher relevancy	74%				
	Item assortment that available in the app	75%				

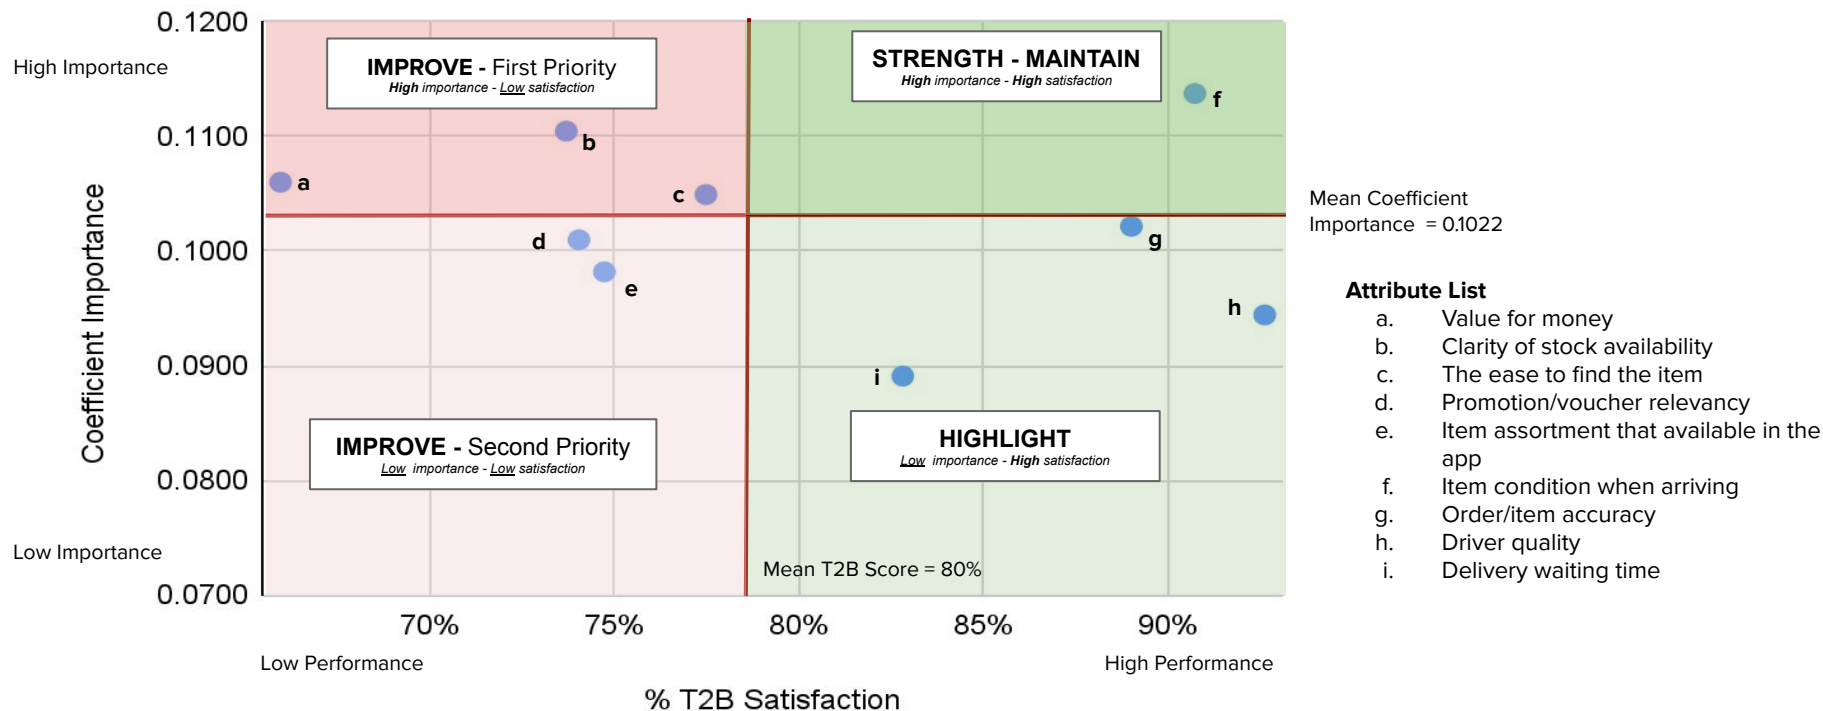

N total = 582

Mean T2B Score = 80%

*Value for money = item price, delivery fee, shopping bag fee

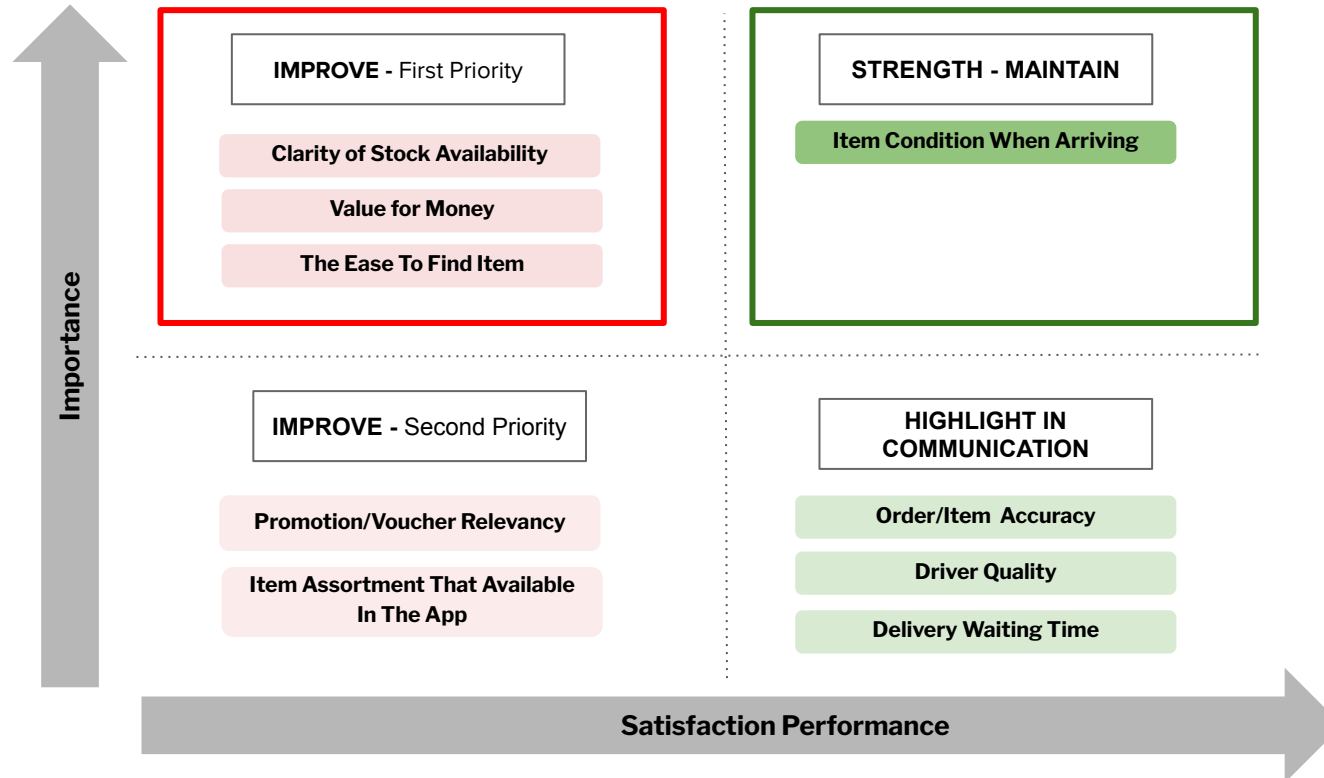

**Shopper quality = T2B score for this attribute is not statistically valid given the low sample size (n = 6. Only 1% of the total respondents transacted in the shopper store; LotteMart & FoodHall)

To create a clear improvement area, we map the attributes into a matrix of satisfaction performance and its importance to overall GoMart satisfaction score.

To improve GoMart satisfaction, we'd need to **maintain our strength** (i.e. good item condition when arriving). Next, we also need to improve the **attributes that received lower satisfaction score** while actually highly influencing the overall GoMart satisfaction.

All of these attributes happen on `Pre-booking` journey (highlighted within the red box).

Additional Data - Shopper Quality Analysis

As mentioned [earlier](#), there was only 1% of total respondents that transacted at the shopper store. Thus the shopper quality satisfaction result is not statistically valid. Nonetheless, many respondents actually **claimed to have been assisted by shopper**. Following is the analysis of that claim.

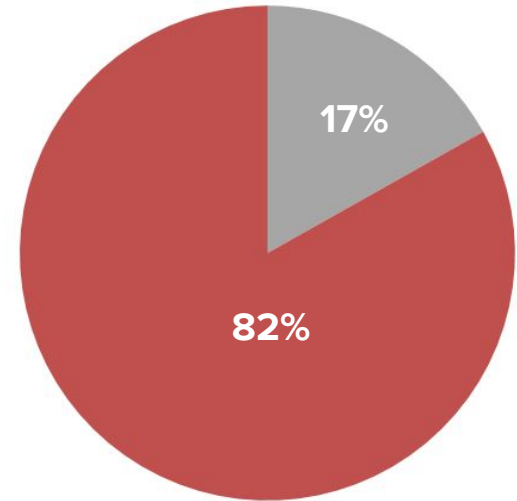

82% of non-shopper store respondents claimed as had been assisted by shopper in their surveyed transaction, while actually they transacted in non-shopper store. This could imply that many of the respondents still misunderstood the term “shopper” or “asisten belanja” that we use.

Despite the small number of customers that have experienced shopper services, all of them were 100% satisfied with the shopper.

Store Location		Number of Respondent
Non-Shopper Store	Alfamart	419
	Alfamidi	150
	Prima Freshmart	6
	Watsons	1
Shopper Store	Lotte Mart	4
	The FoodHall	2
Total Respondent		582

572
non-shopper
store
respondents

T2B
Satisfaction
score = 100%

- Claimed as had been assisted by shopper (false statement)
- Claimed as was not assisted by shopper (correct statement)

***Shopper Quality Research Questions:**

“How is your rating towards the **shopping assistant quality (shopper)** in GoMart? GoMart shopping assistant (shopper) is a GoMart partner who will be in charge of choosing item at the store. It is **different from driver nor store’s employee**. Example: communication, attitude, item quality that is picked by shopper”. For more detail please refer to this [document](#).
