

This doc includes 2 Generic Engagement plans that have been created to tackle different needs.

Two distinct groups: one strategic, the other tactical.

- **Studio Elevator:** Strategic multi-team problems, longer-term engagement, E2E experience vision.
- **Studio Accelerator:** Tactical short-term engagement and near-term impact accelerating key company initiatives (e.g. Personalization, CDP).

Read more: [Studio structure, impact and problem space](#)

Note: We're just getting started. So as part of H1 Studio setup, we'll closely review, iterate and change things in our plans to meet the needs of the PDG org.

Studio engagement plan.

A flexible process that enables us to collaborate effectively with different teams across different phases of the project .

Bridge model: The dotted lines represent bridge work. Solid lines represent laps.

- Bridge work: The Studio dream team syncs with the Stakeholder team and Deciders: Asks for their input, or to present outcomes for sign off.
- Laps: Studio dream team execution time.

The three circles represent the **VISION, DESIGN and VALIDATE** phase.

It's rooted in shared ownership, while minimizing the impact on the resources of stakeholder PDG + Functional teams.

Deciders

Different Decider per project

C-level Leadership – sponsors for a Elevator or Accelerator project.

Deciders on:

- They will **sign off** on key deliverables – Project Brief, Design + Validation phase.
- When needed, Support Studio engineers to build bigger things in parallel of PDG planning cycles.
- Ensure objectives around personalisation and innovation continue to be part of company-wide planning cycles.

Studio Leads

Pratik, Abhinit, Sacha, Wolfi, Borrys

Design Leads in collaboration with Prod Ops.

Accountable for:

- Daily Studio operations, engagement plan and and key deliverables.
- Ensure that Studio has shared ownership and outcomes (concepts or experiments) flow back into x- product x-function roadmaps.

Studio dream team

This dream team rotates per project based on project scope.

Team members will come from:

- Design Leads from PDGs that are a key stakeholder in the project
- Research Lead
- IxD + Mobile engineering
- Marketing

Responsible for:

- Active involvement in Collabs
- Active involvement in Laps

Stakeholder team

Different team per project.

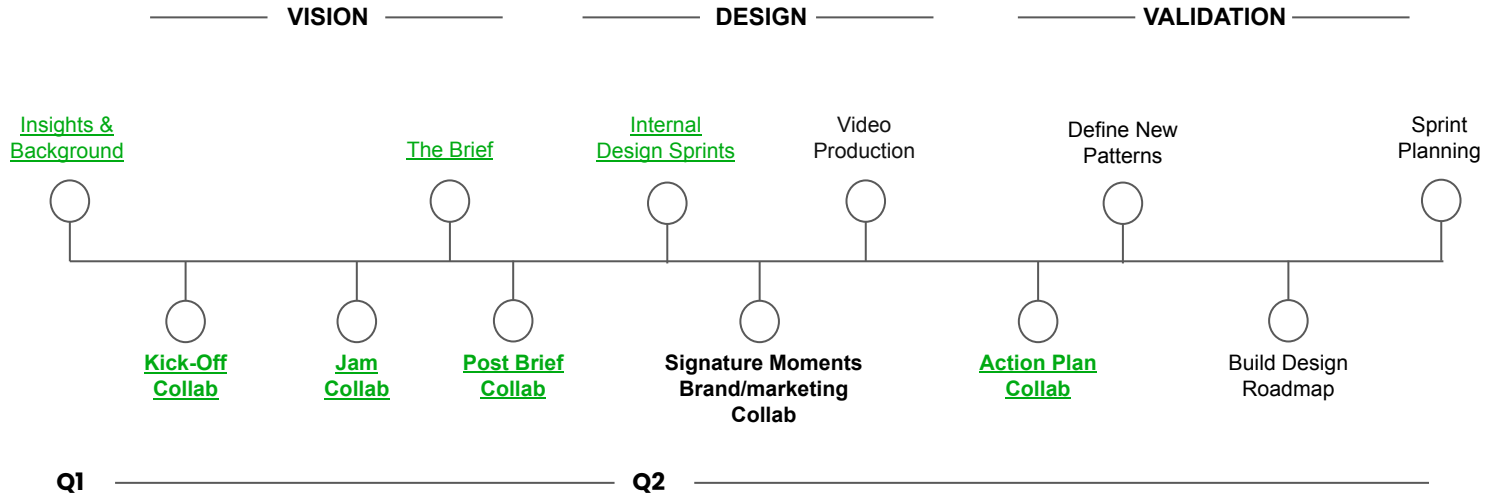

Team members will come from:

- PM Leads from PDGs that are a key stakeholder in the project
- Business and Functional leads (e.g. Customer Success, Fraud, AdTech)
- Engineering
- DS

Consulted for:

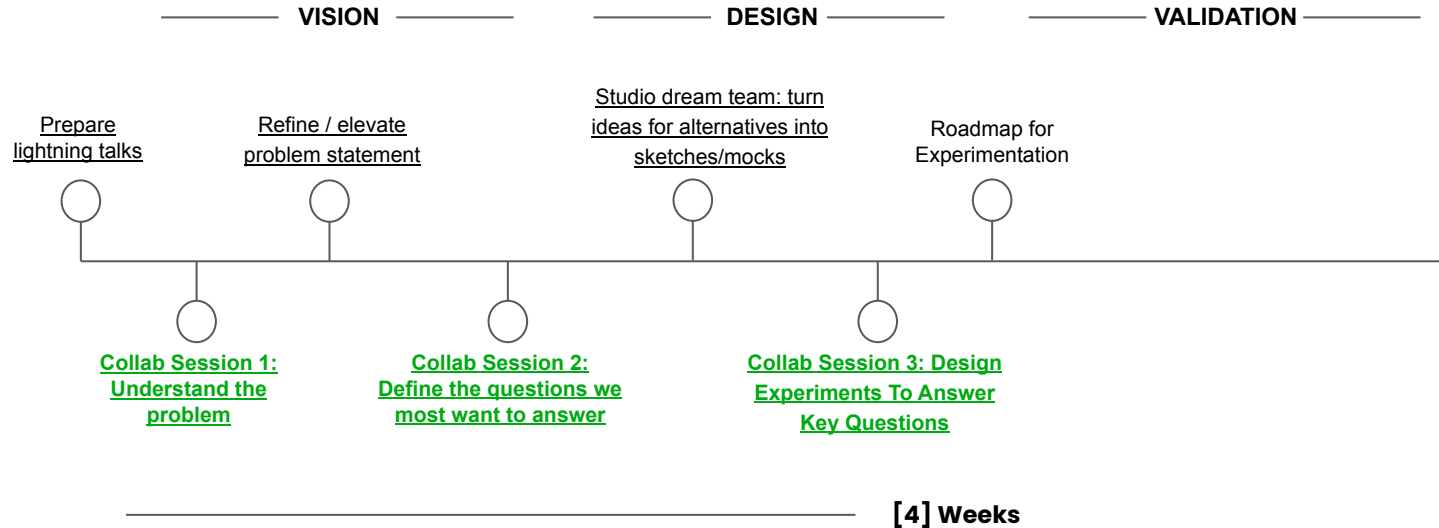

- Stakeholder team will be consulted individually on their ideas and priorities.
- In collaboration with Studio Leads ensure there's alignment on prioritised scope and objectives.
- Receive a weekly / monthly progress update from Studio Leads.

Elevator. Working sessions and Sign off moments with stakeholder teams are followed by stretches of executional work by the Studio team.

Collab Sessions: The Collab sessions are working sessions with the stakeholder teams. The Studio team works on the other items and shares back. There are three Loops: 1) Vision, 2) Design, 3) Validation. Leadership signs off on scope and action plan at the beginning of each new loop.

Accelerator. Collabs with stakeholder teams are followed by stretches of executional work by the Studio Accelerator team.

Collab Sessions: The Collab sessions are working sessions with the **Stakeholder team**. The **Studio dream team + Leads** work on the other sessions and share back during collabs.

Our aim is to get our solutions into the hands of our customers, fast.

We've designed these engagement plans to ensure that we won't have a waterfall-like process with a clear "hand-off" during the Validation phase. We want to build in flexibility, and create an ongoing partnership with the PDGs where we can extend engagements to prototype, test or experiment.

The action plan, roadmap and sprint planning would be done in partnership or even driven by the Stakeholder team. Leadership decides, and commits, to support Studio and PMs to build certain solutions. Studio can:

1. **Build in parallel**

Leadership can decide to enable Studio engineers to build bigger things in parallel to Experiment and validate faster. Studio engineers in the team could build solutions to a high level of fidelity before handing it over to the product teams concerned.

Smaller enhancements could flow immediately into Product Roadmaps, to be picked up by respective PM Leads. There is commitment from leadership to ensure there are objectives around Personalisation that allow teams to prioritise this type of work.

2. **Monitoring the impact**

Once the solutions have been implemented the Studio would work with the stakeholders to monitor and measure the impact the initiatives have brought, and produce a final report, and bring the theme to an end.

Studio Elevator

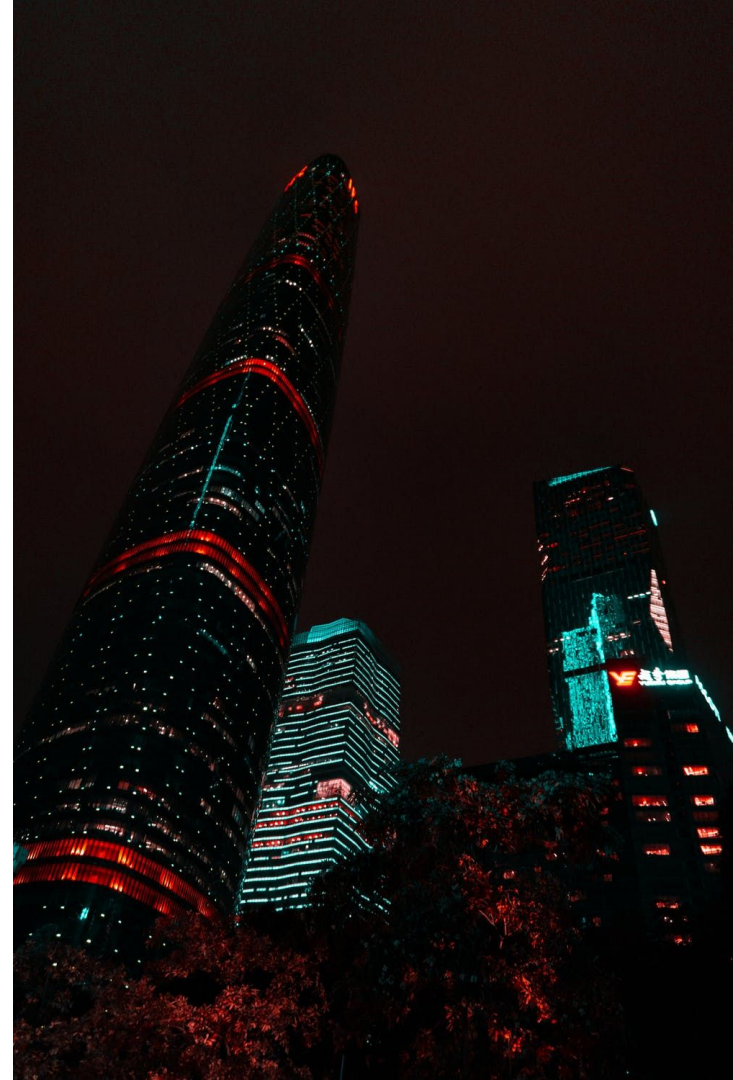

detailed plans per phase

Insights & Background Work

- Define and agree on scope with Deciders and Stakeholder team
- Identify existing research on Customer needs related to home screen
- Conduct competitive audit across industry
- A day in the life explained by our customers
- Collect research findings & synthesize to get insights
- Identify our issues/breakdowns (quality bar model)

Output

- Materials above feed into **Kick-Off Collab**
- Studio team polishes these into a presentation exemplary of the design quality and level of craft and aesthetics representative of the future vision.
- Include new forms of communication and content (eg, video interviews with key stakeholders across the company)

Kick-Off Collab

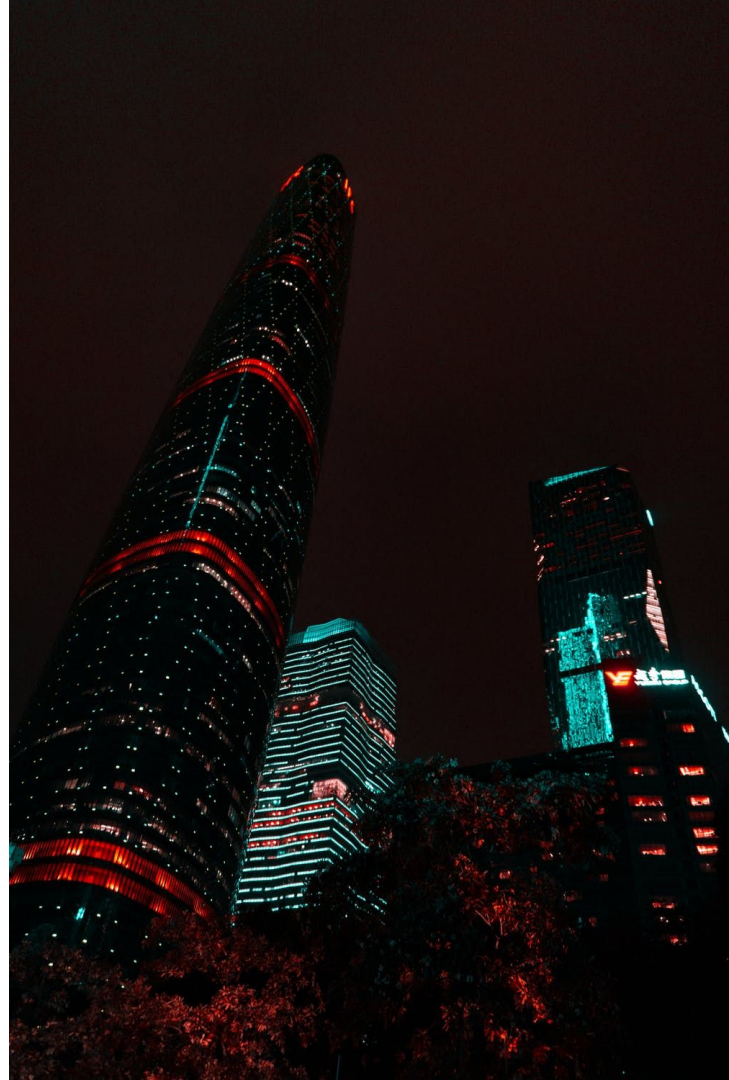

- Show the **vision for this type of work** with beautiful visual design
- Present a **rich map of the primary use cases, flows and personas** for teams extending across team boundaries to represent the experience from a customer perspective.
- Tell a visual story about the **competitive solutions** in the market.
- Show the **insights from a customer perspective** into the set of experiences.
- Identify our **issues/breakdowns** (quality bar model) bringing in **data from CX and analytics**. Complement data with visual design audit, quality bar model, etc from design/product team.

Activities

- 5 star assessment. What would 6 or 7 star look like?
- What would customers say about the 6-7 star experience?
- What problems do we need to get right / solve for?

Output

- Materials above feed into **Jam Collab**
- Activity outputs and agreement on problems to solve for.
-

Jam Collab

Define The Vision

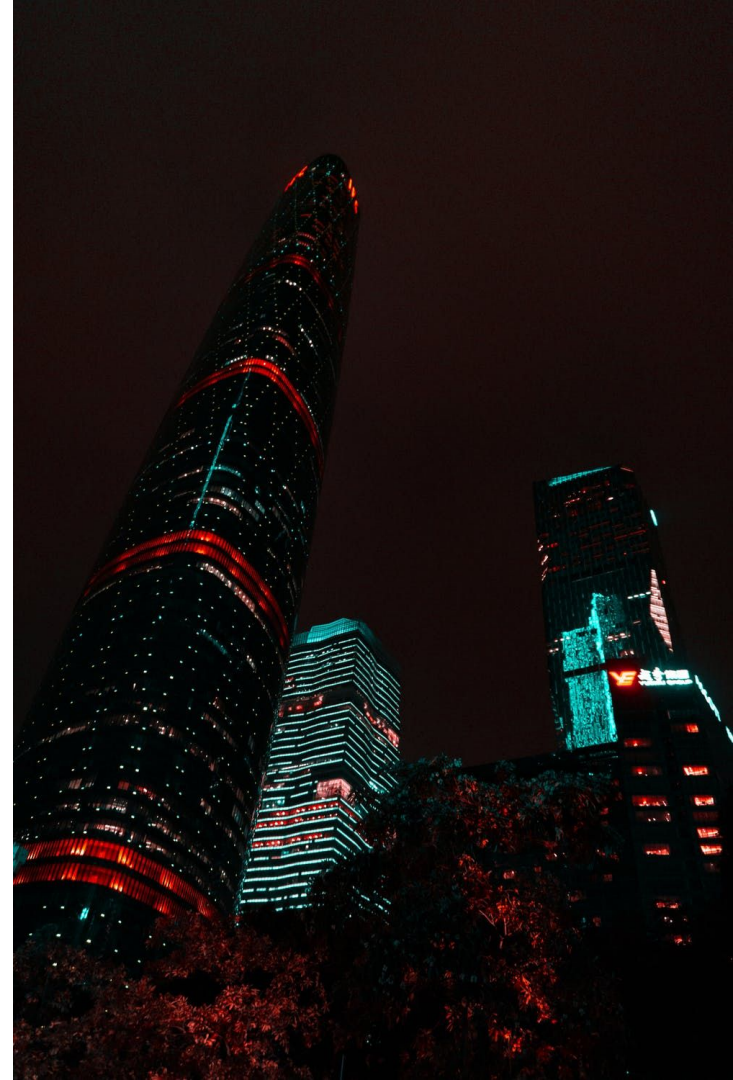

- Review insights
- Level up exercise (fun mind game to establish a high bar)
- Problem-solving activity (ideation, brainstorm)
- Focus on breakdowns in the journey across journey (nav, emotional)
- Create an emotional map – how do we talk to them at each point
- Develop shared ownership of a UX metric
- What part needs to be signature experiences (IP)?
- Deeper dive into insights, analytics, findings, research

Who Attends

- Stakeholders are active participants in shaping vision

Output

- Branded epic scenarios
- Materials above feed into **Dream Team Sprint**

The Brief

Activities

- Review the elements of the Brief prepared by the team

Who Attends

- Deciders

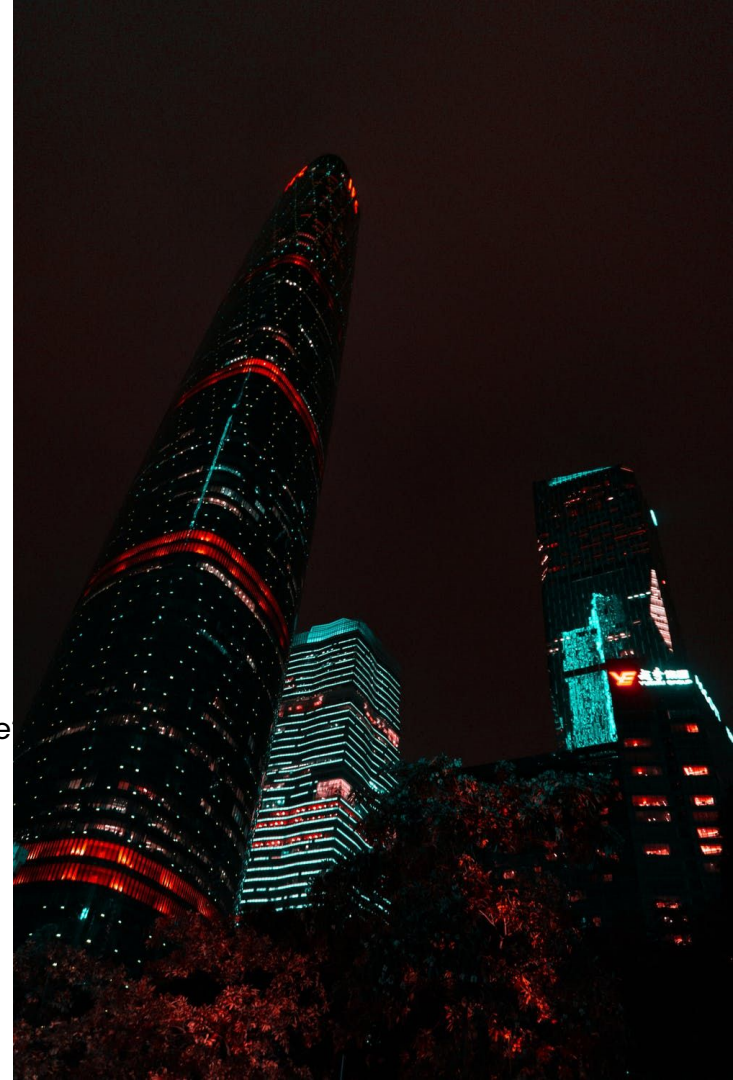

Output: Elements of the Brief

- What is the challenge we're solving?
 - Is the challenge part of a larger problem?
- Who is it for?
- Why do people care about it? (needs finding)
- What purpose does it serve?
- How do we know if it's successful?
 - Does the solution have implications/repercussions elsewhere

Maybe include:

- What touchpoints are targeted for signature experiences?
- What customer insights do we have?

[Latest Brief structure discussion](#)

Post Brief Collab

Activities

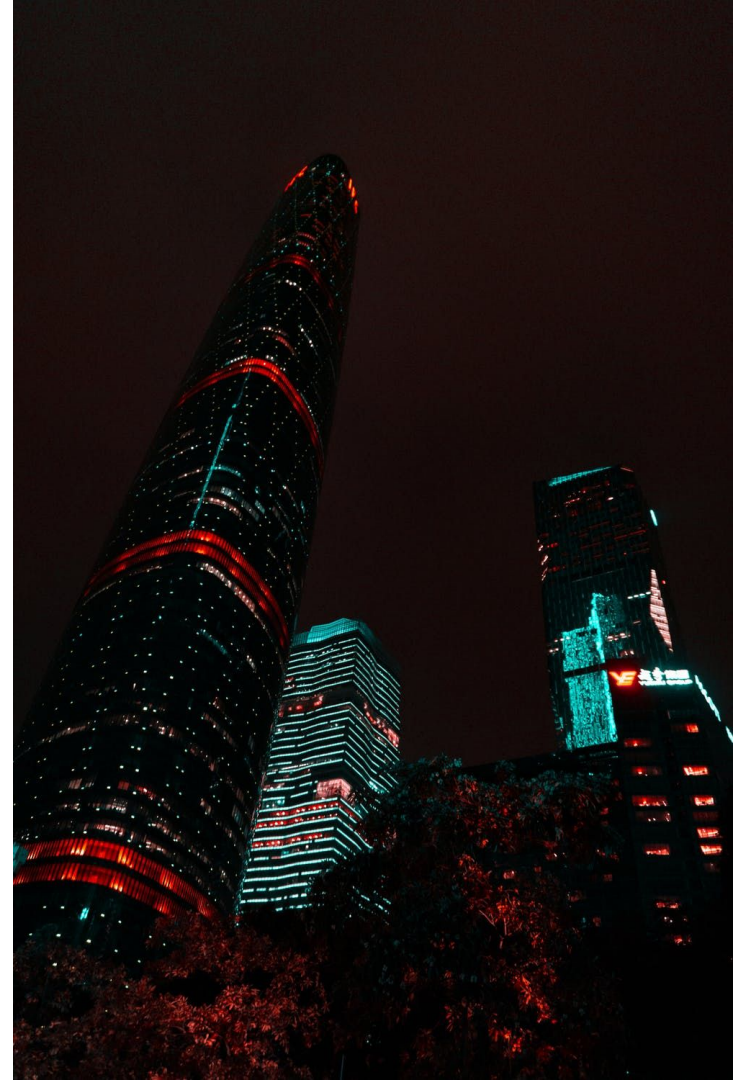

- Review output from Studio team and agencies:
 - Deep set of layouts & interactions
 - Articulation of design language
 - Short film of new experience
- Round robin feedback from key stakeholders across teams and roles.
- Envision & pick primary directions to explore (set up for roadmap planning)
- Decide on which part needs to be signature experiences (IP).

Who Attends

Product, engineering, design, care etc all work together to envision and shape the direction for the user experience:

Output

- Branded epic scenarios
- Materials above feed into **Action Plan Collab**
- Dream Team iterates on design proposals and storylines.

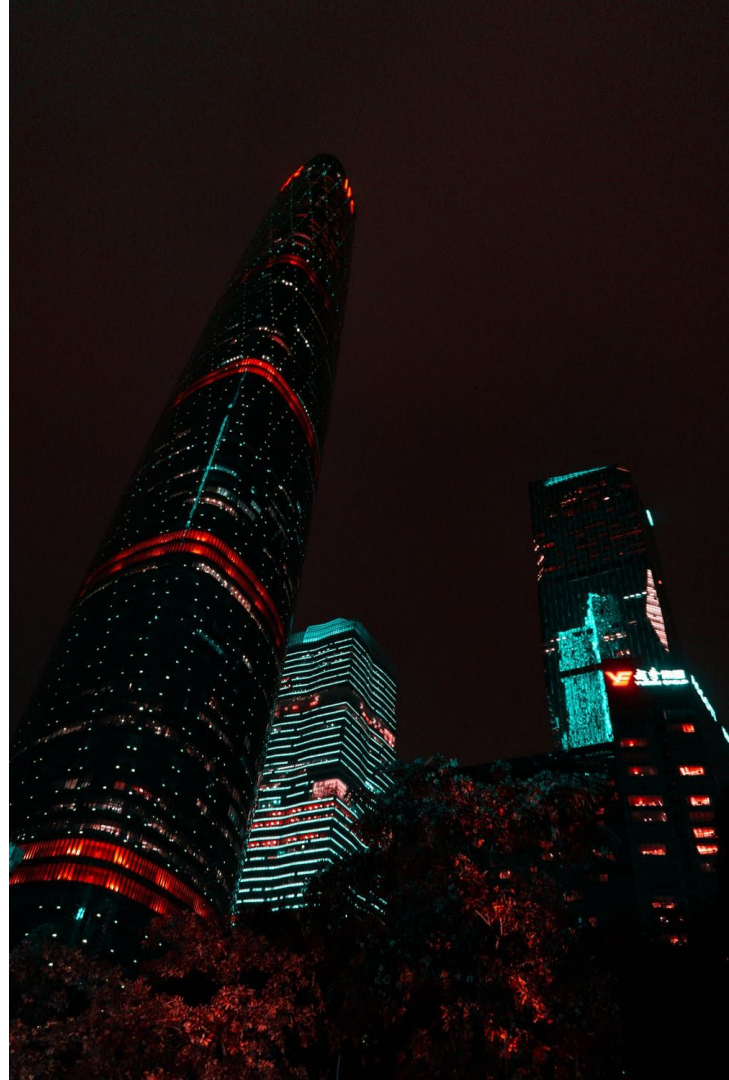

Dream team sprints

Activities

- 30 day intense design exercise with internal dream team
- 30 day engagement:
 - 3 agencies to attack specific signature use cases
- 2 weeks to create video

Studio team – 3 piece deliverable:

- Deep set of layouts & interactions
- Articulation of design language
- Short film of new experience

Action Plan Collab

Activities

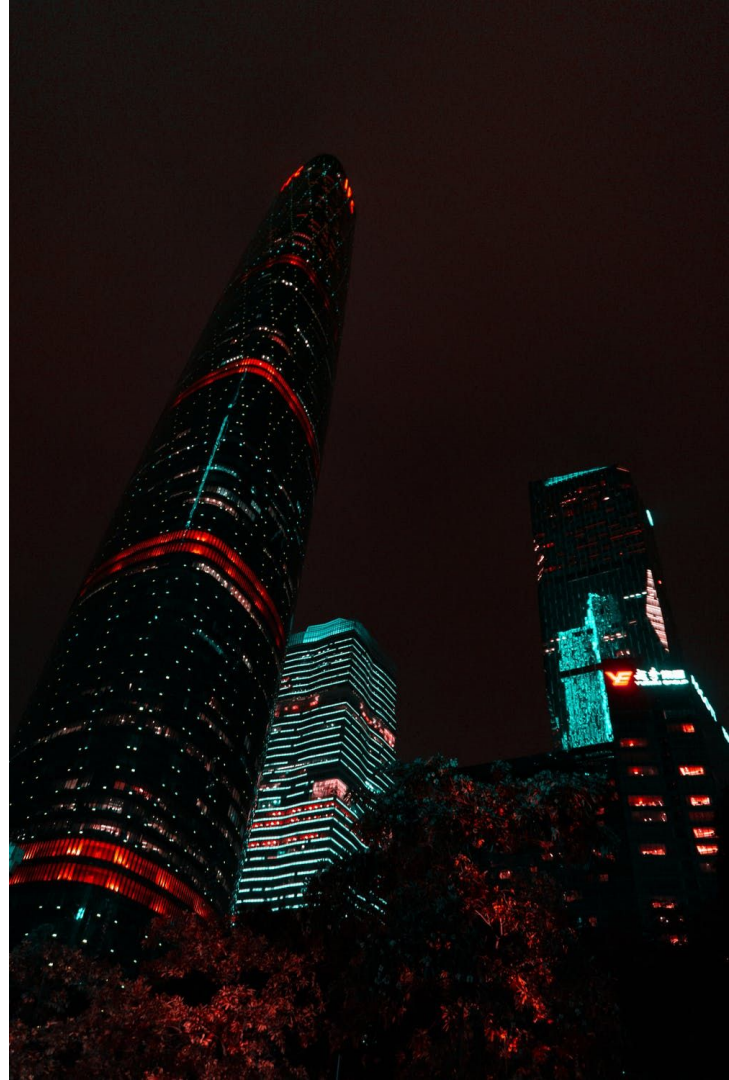

- Critique, participate, pick directions to explore (with beta team partners)
- Build Design Roadmap: round of usability tests (value bar model)
- Desirability study
- Prioritize sprints (dev cycles)
- Define new design system patterns

Who Attends

- Share with Deciders and whole design team to get feedback

Output

- Guiding principles & direction
- Roadmap with sprint cycles for design/eng
- Usability test planning / desirability study
- New design system patterns
- **Agreement from Leadership to either:**
 - Enable Studio Engineers to build bigger things in parallel
 - Ensure that smaller enhancements flow back into current PM roadmaps.
 - There is commitment from leadership to keep objectives around Personalisation and Innovation during planning cycles.

Studio Accelerator
detailed plans per phase

Insights & Background Work

PDG team to prepare

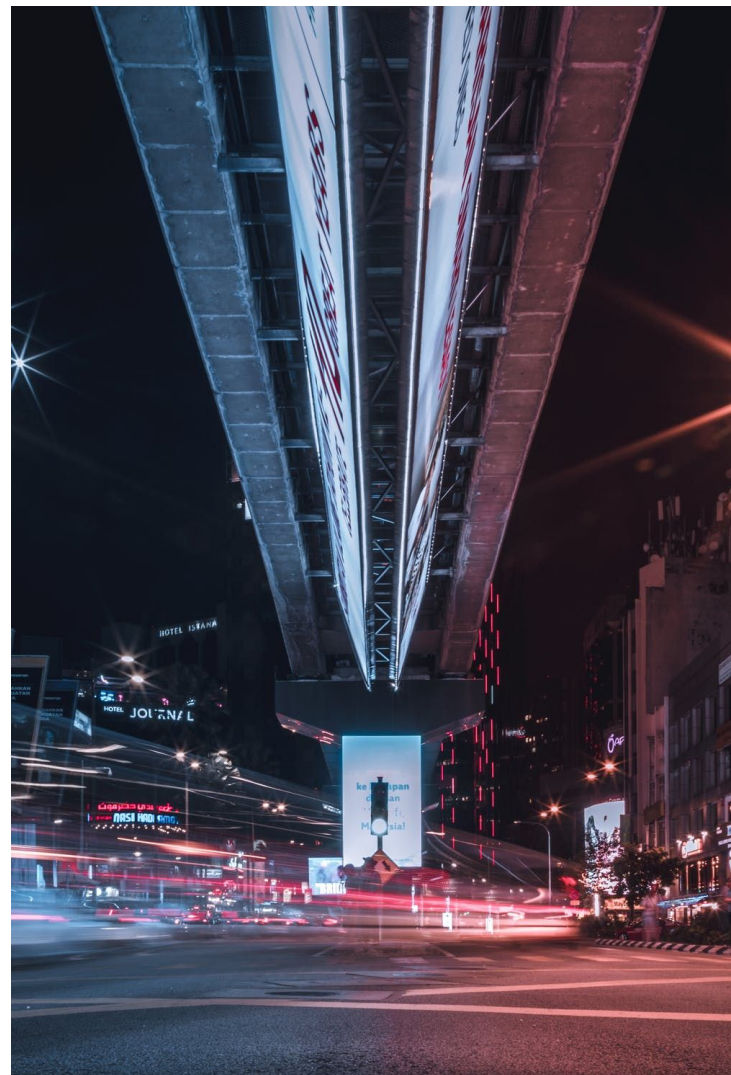

- Scope: Business statement goals
- Scope: Design Challenge
- Lightning talks on:
 - The Northstar vision
 - Path to the northstar
 - Key consumer problems
 - Current Design / UX – snapshot of where are today
 - Any other specific presentations from business, eng, sub-teams

Answering key questions

- What are the key questions for the product?
- What are the issues for design?
- Where do we see opportunities to improve customer experience through personalisation?
- What is the northstar vision?
- What are the critical paths and integration for the northstar journey?
- What is the single most important problem to solve right now?

Output

- Materials above feed into **Session 1**

Session 1: Understand the problem

Business Statement goals + Design Challenge

Lightning talks (presentations) - 45-60 mins

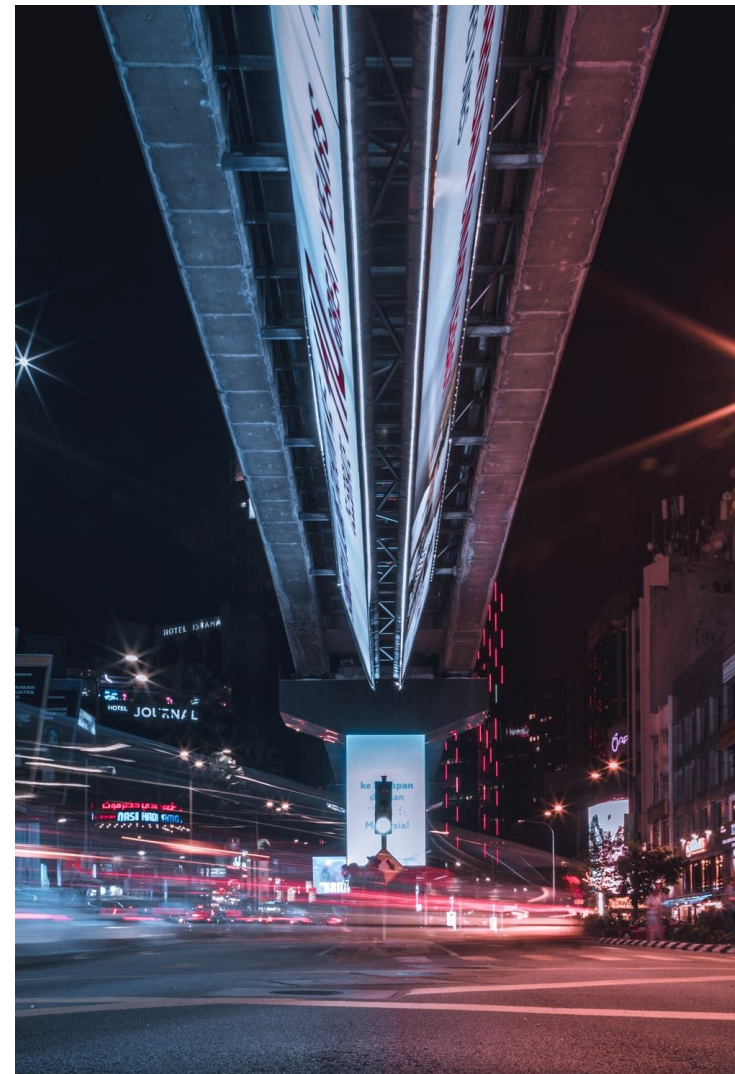

Expectations for note-taking by everyone during lightning talks (Miro board)

Discussion 30 mins

Bridge to thinking about the design challenge and defining questions to be answered. What are our assumptions? Questions?

Output:

Better understanding of key questions. Input for second Session

Post Session 1: Refine and Elevate

Activities

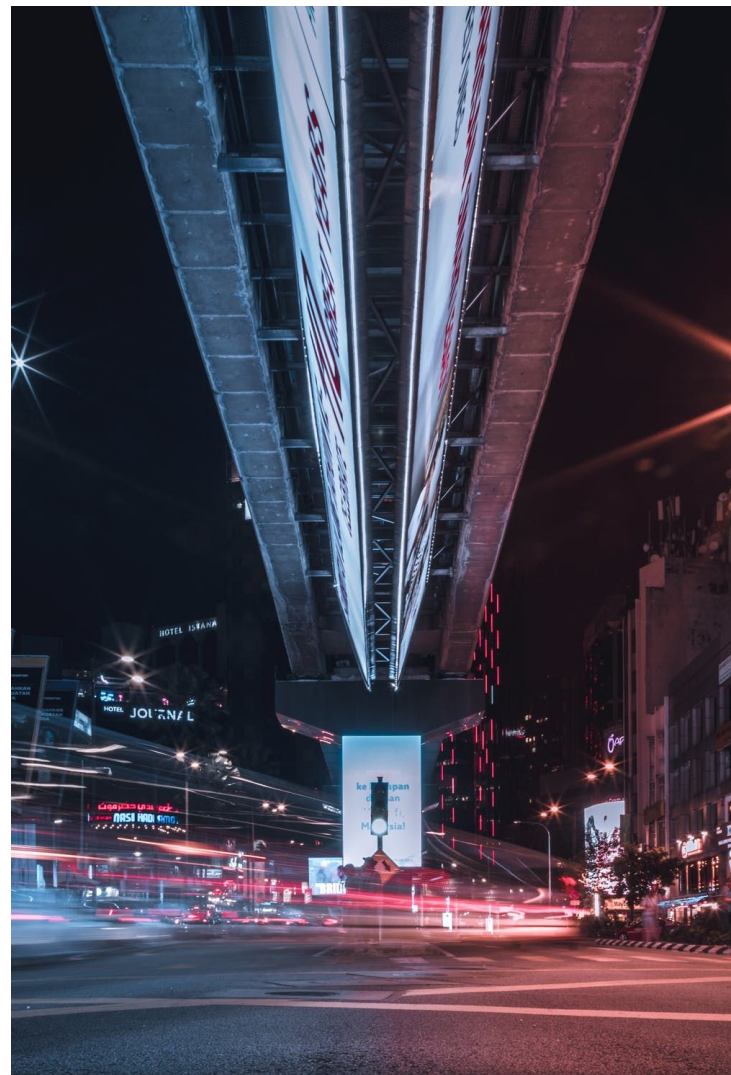

Fine-tune JTBD, Leverage [this Miro board](#)

- Problem identification (it's better if the team had started preparing the problems D-7 before we conduct the workshop)
- Problem prioritization
- Solution ideation
- Solution prioritization
- Generating action items

Focus on key questions (reframe these in terms of consumer needs, value, best practices for success)

Set up Miro boards to support these activities:

- Customer journey mapping > service design blueprint for new, returning, power, lapsed.
- Identify the pain points at a functional and sentiment level.
- What are the questions we most want to answer?
- What would success look like? Brainstorm improvements & alternatives to test that answer the key customer questions?
- What are our hypotheses? What are our assumptions?
- How could we make this a 5 star experience? 10 star?

Session 2: Define The Questions We Most Want To Answer

What do we most want/need to learn about our customers?

What can we test to get answers?

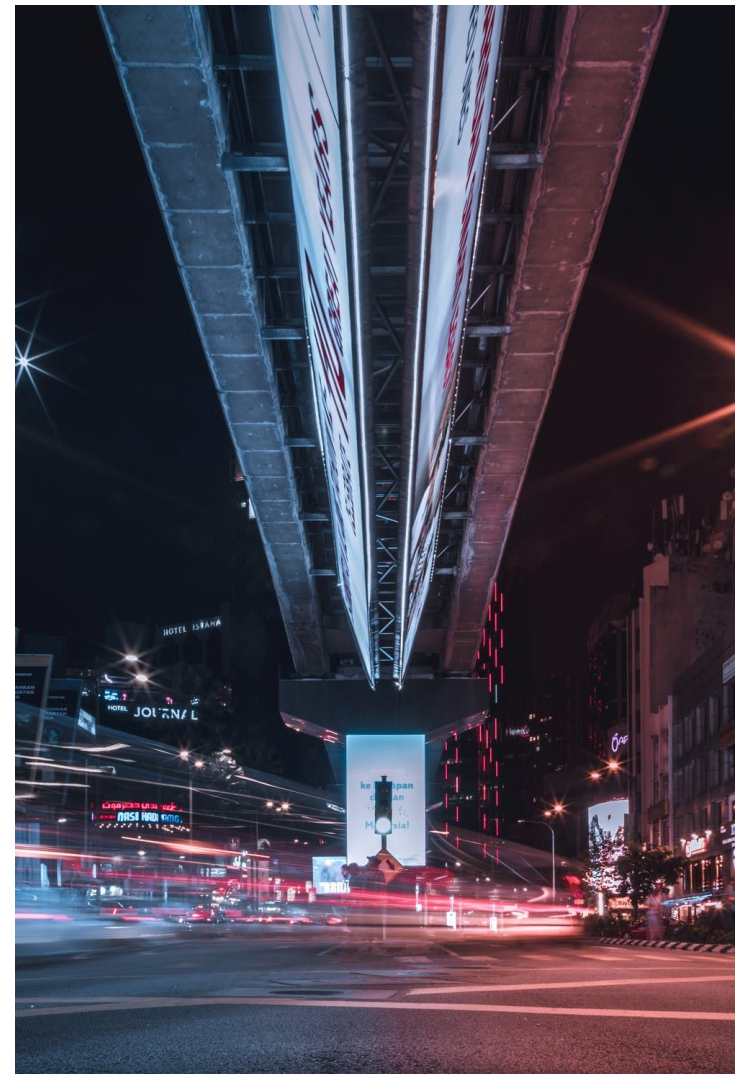

What are the main audience segments and their needs?

What elements are at the quality bar level we want vs. not?

- Customer Journey Mapping (new, returning, power, lapsed)
- Identify the pain points at a functional and sentiment level.
- What are the questions we most want to answer?
- What are our hypotheses? What are our assumptions?
- What would success look like? Brainstorm improvements & alternatives to test that answer the key customer questions?
- How could we make this a 5 star experience? 10 star?

Output

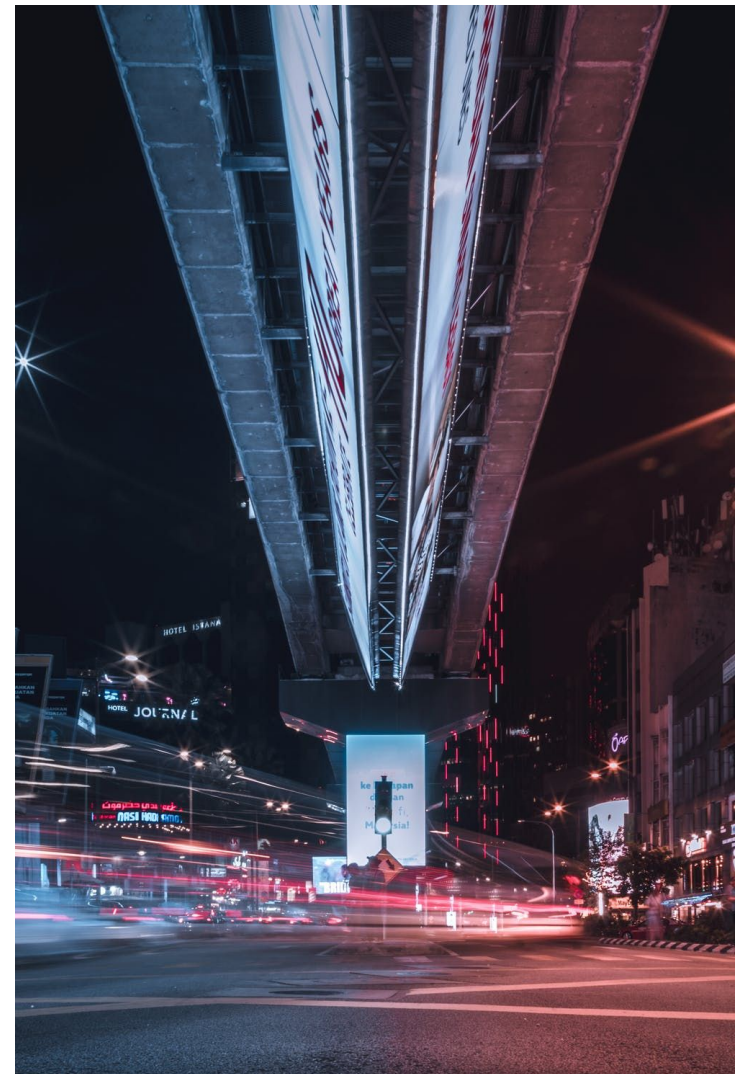

- Questions we most want to answer, hypotheses, assumptions, some initial ideas for potential alternatives to test

Studio dream team: turn ideas for alternatives into sketches/mocks

Activities

- Synthesize & format output from session 2 and insert into the sections of deck for session 3
- Design work to turn ideas for alternatives into sketches/mocks

Session 3: Design Experiments To Answer Key Questions

Identify the assumptions & hypotheses

Create the design alternatives to test them

Identify the outcome measures and metrics

1. [VIEW AB TESTS EXPERIMENT DECK](#)
2. Planning for experimentation: roadmap, timeline, target date for follow-up check point for interpreting the experiments (driven research)
